Basic Terminology

Origin is a copy (*fork*) of the upstream repository in your GitHub. You will have read/write access.

Repository holds all of the code and the history of the project.

Branch a sequence of snapshots (*commits*) that make up the development history

Upstream belongs to the project. You will have read-only access.

Local is a copy (*clone*) of your origin repository on your local machine.

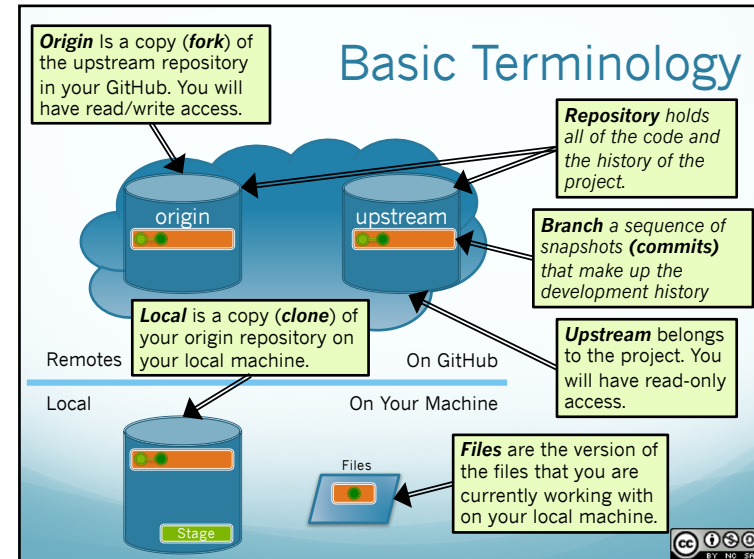

Remotes

On GitHub

Local

On Your Machine

Files are the version of the files that you are currently working with on your local machine.
