DEVNET

DevOps Friendly Doc Publishing for APIs & Microservices

From Monolith to ...

Microservices

Microservices

- Small, easy to understand code base
- Easy to scale
- Easy to throw away
- Easy to deploy
- Ability to experiment with technology stacks
- Smaller teams
- System resilience

“Microservice applications are composed of small, independently versioned, and scalable customer-focused services that communicate with each other over standard protocols with well-defined interfaces.”

standard protocols with well-defined interfaces = APIs

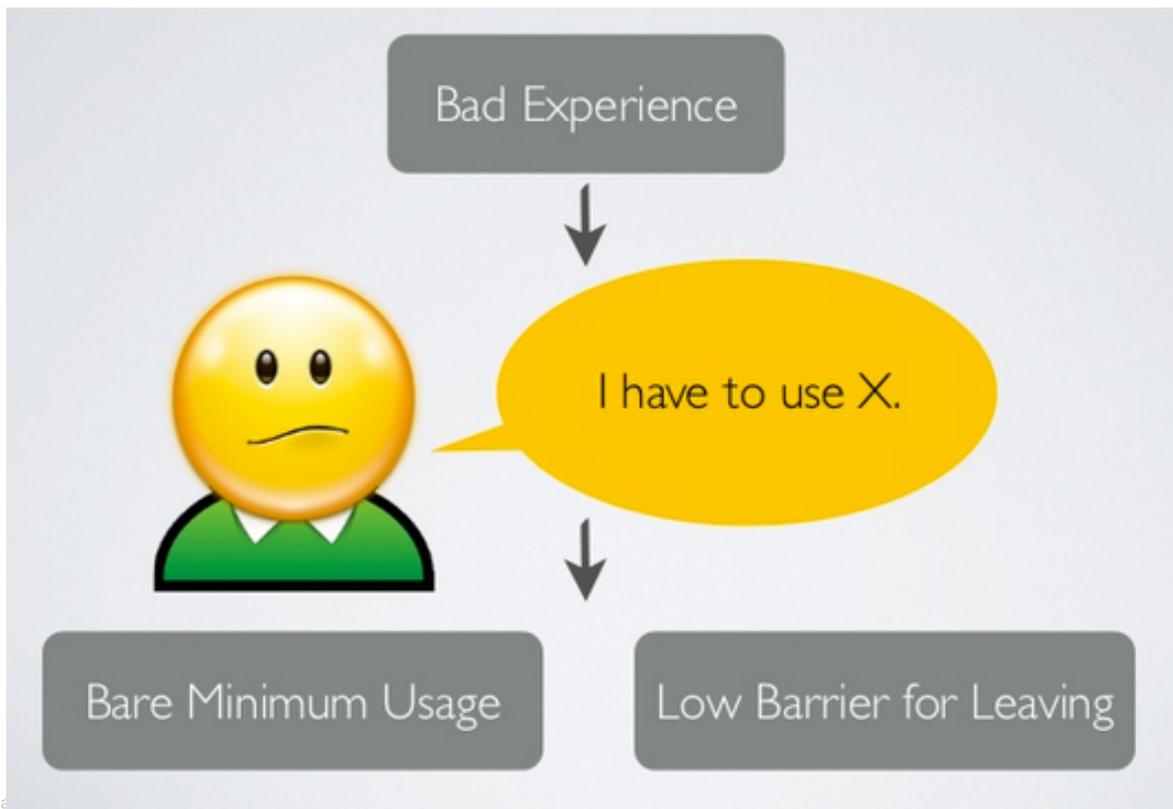

*I worry about developer
experience.*

What is Developer Experience?

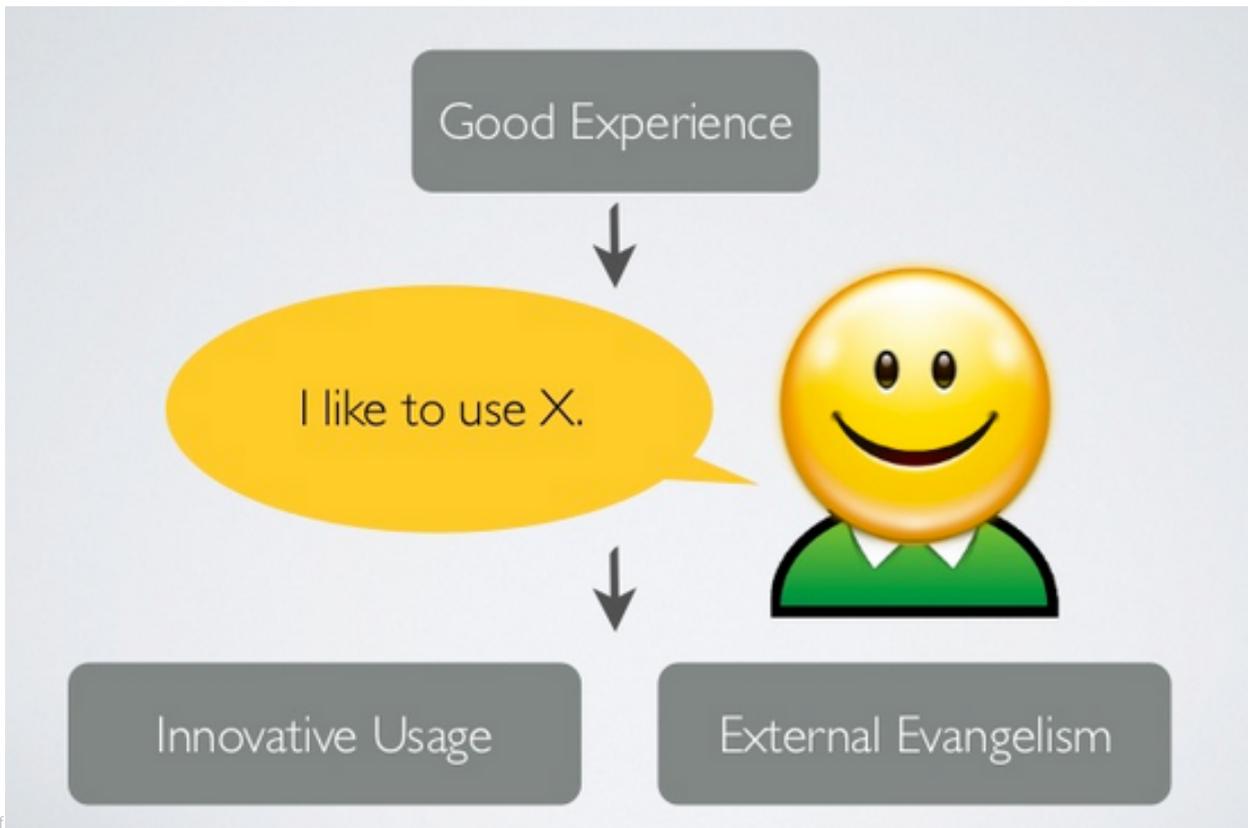

“The sum of all interactions and events, both positive and negative, between a developer and a library, tool or API.”

*Because developers are users
too... even your internal developers*

Why does DevX Matter?

Why does DevX Matter?

Developer
Experience Best
Practices

But are you applying
these for internal
APIs?

10 Reasons Developers Hate Your API (and what to do about it)

John Musser @johnmusser / API Science @apiscience

THE DEVELOPER EXPERIENCE

WHAT IT IS

WHY IT MATTERS

HOW TO MAKE IT NOT SUCK

<http://pamelafox.org>

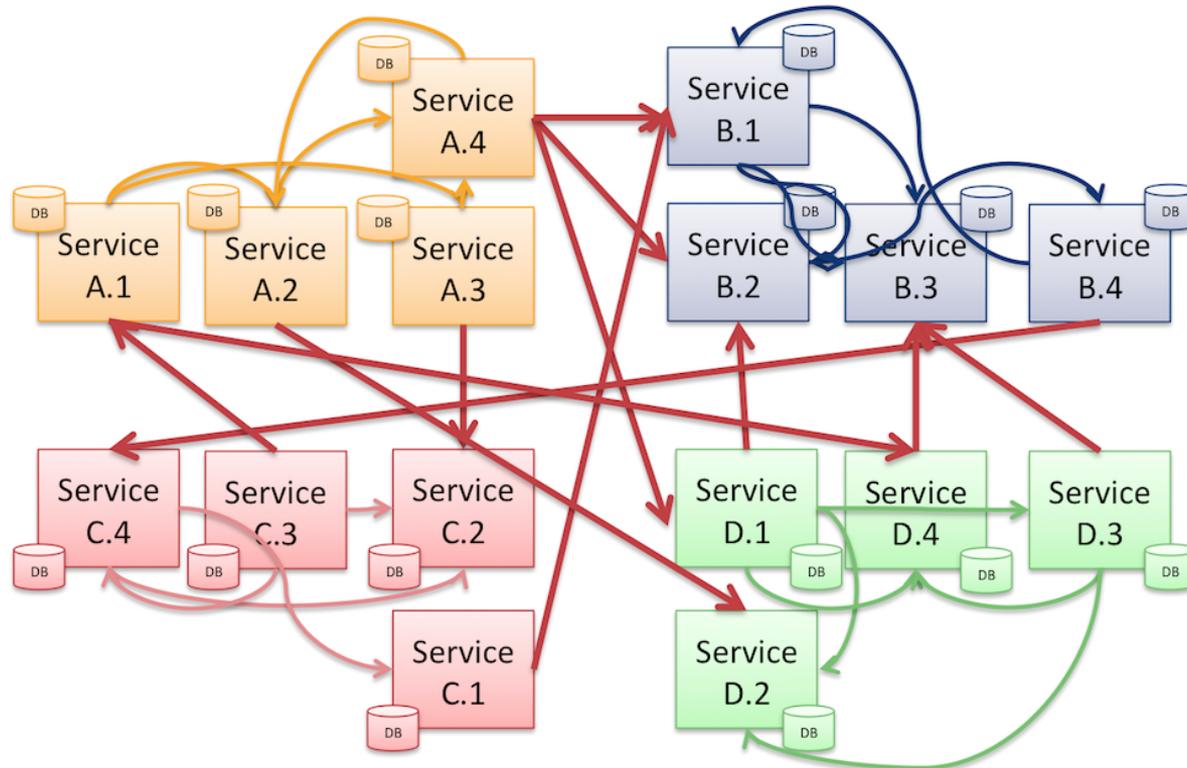

twitter.com/

@pamelafox

pamelafox@

gmail.com

n-to-n relationship between services = n to n relationship between developer using these APIs

DevX is important for INTERNAL APIs too.

- Creating good API docs for EXTERNAL Usage is hard
- How will teams prioritize time to create good internal docs?
- How will teams keep the docs for so many internal APIs up to date and in sync with code?
- Good API docs will be essential to bridge across organizational boundaries

You need:

API Reference Docs

parameters, request,
response etc.

Error Codes

Versioning

Long Form Docs

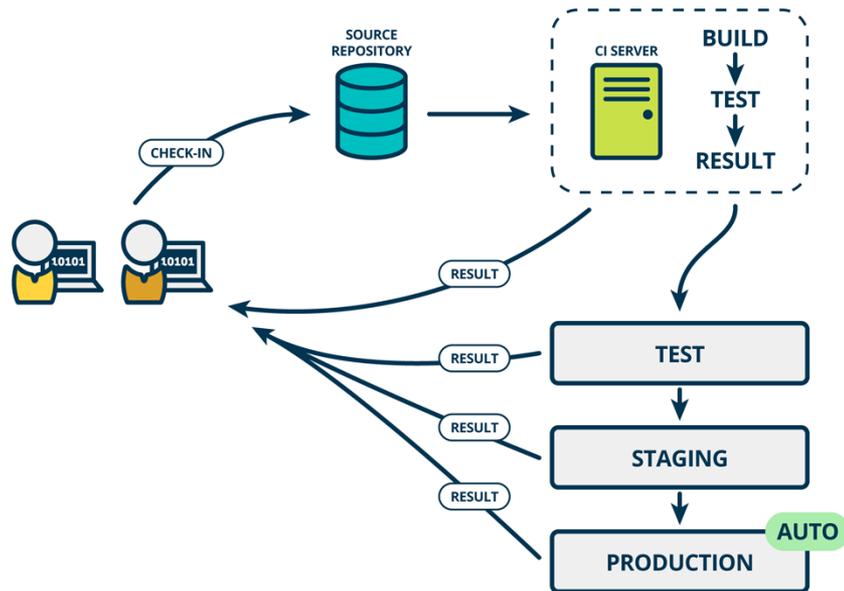

Developer Guides

Authentication

Sample Code

How to get help or report issues?

Docs must be tied to CI/CD pipeline

How are people doing this?

/api Show/Hide List Operations Expand Operations Raw

GET /api/ping.json

GET /api/raise.json

GET /a

Sample Markdown Document

Some Latin Text

Sed ut **perspiciatis unde omnis** iste natus error sit voluptatem accusantium doloremque laudantium, totam rem aperiam, eaque ipsa quae ab illo inventore veritatis et quasi architecto beatae vitae dicta sunt explicabo. Nemo enim ipsam voluptatem quia voluptas sit aspernatur aut odit aut fugit, sed quia consequuntur magni dolores eos qui ratione voluptatem sequi nesciunt. Neque porro quisquam est, qui dolorem ipsum quia dolor sit amet, consectetur, adipisci velit, sed quia non numquam eius modi tempora incidunt ut labore et dolore magnam aliquam quaerat **voluptatem**. Ut enim ad minima veniam, quis nostrum exercitationem ullam corporis suscipit laboriosam, nisi ut aliquid ex ea commodi consequatur? Quis autem vel eum iure reprehenderit qui in ea voluptate velit esse quam nihil molestiae consequatur, vel illum qui dolorem eum fugiat quo voluptas nulla pariatur?

Traditional Sample Text

==Lorem ipsum== dolor sit amet, consectetur adipiscing elit, sed do eiusmod tempor incididunt ut labore et dolore magna aliqua. Ut enim ad minim veniam, quis nostrum exercitation ullamco laboris nisi ut aliquip ex ea commodo consequat. Duis aute irure dolor in reprehenderit in voluptate velit esse cillum dolore eu fugiat nulla pariatur. Excepteur sint occaecat cupidatat non proident, sunt in

“We use Swagger.”

Cool!

“Oh, and we have some “how-to” guides in a Wiki.”

Oh. Anything else?

“That’s it”

“And, there are few dev teams that use RAML.”

Great!

“But that’s it ...”

Really?

“And the authentication guide is in Read The Docs

hmmm?

“Oh, yea.. And some teams use markdown

“And we have sample code snippets in Github.”

These are all great
tools.
But...

- How do keep all of these in sync with code?
- Are they all tied into your CI/CD pipeline?
- Bewildering jungle of user experience
- Where did I put that link?
- No easy path to publishing externally, if API is opened up to public.

API Reference

- ✓ Auto generate
- ✓ Automate

Long Form Docs

- Authentication Guide
- Getting Started
- Examples

- ✗ Can't auto generate
- ✗ Hard to automate

Can we build something
that will help?

Yes

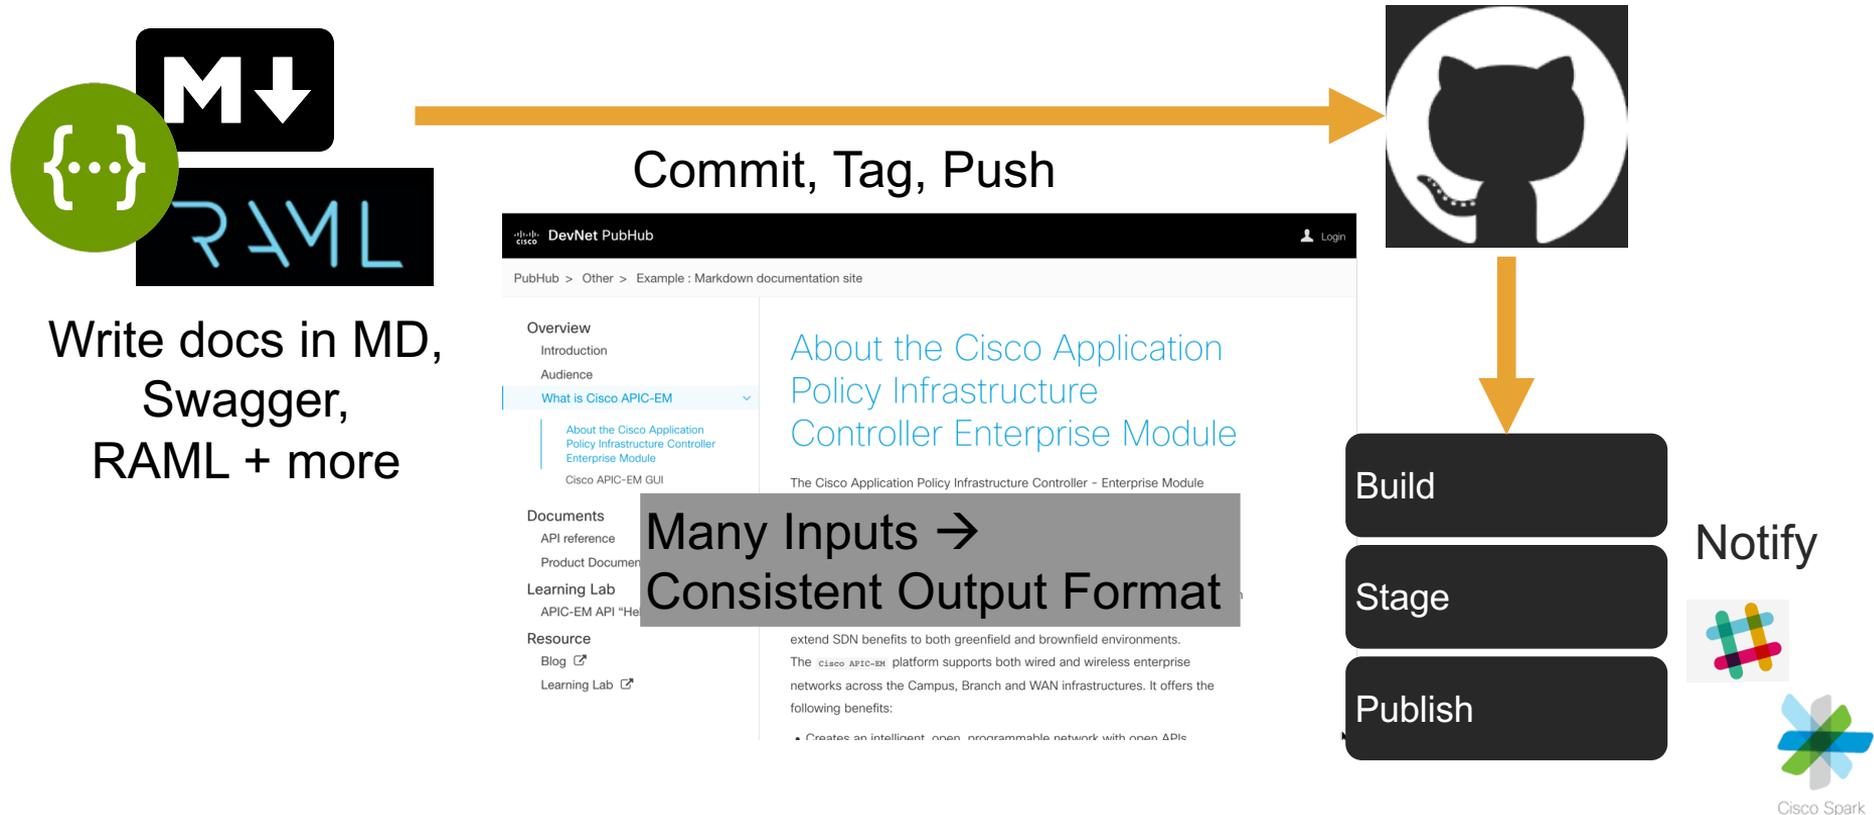

- CI/CD Friendly Publishing Flow
- Developer friendly authoring tools
- Central Location for internal API Docs
- Maintain team ability to pick best tool
- Easy migration path to externally publish docs
- Keep sample code in sync with docs

**Accept multiple input formats →
normalize the output for consistent
experience**

No

- Reinvent the Wheel
- Build something proprietary and closed
- Strictly enforce one approach or input format
- Drop key functionality like “Try it Now”

PubHub: DevOps Friendly Publishing for Documentation

Welcome to PubHub

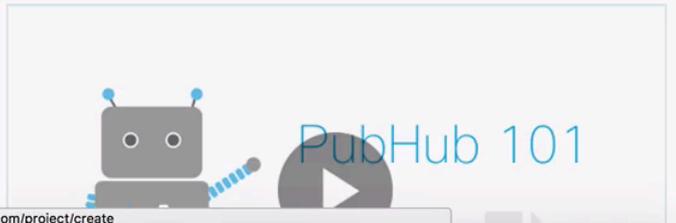

A documentation publishing workflow tool to easily publish docs on Cisco DevNet.

Socket.IO Tutorial

This page explains how an app can use the Flare Socket.IO API to discover and interact with things in an environment.

The API tab gives generic examples of how you can exchange JSON messages with the server using a Socket.IO client library on your platform of choice.

The JavaScript, Swift and Java tabs give higher-level examples that show how you can use the Flare platform libraries to do the same thing.

Device setup

Lessons Learned

... and still learning

User love

Long Form Docs + Reference
solves a big problem

“Saves time. No cycles spent on
formatting, but still proud to
share.”

“Didn’t have to think about it.
Could start documenting right
from beginning”

Accepting multiple input formats is
key for big organizations

Developers

- Very happy with git based workflows
- Dev friendly tools make it more likely than internal APIs will have documentation
- Quality of information is better the more devs contribute
- APIs & Automation

Writers

- New to git
 - UI help with project creation
- Continuous delivery vs. continuous deployment
 - Approval Workflow
 - Git office hours for writers

Thoughts

- You need good docs for your docs tool.
- Process for cross organization contributions
- Internal to External Path
- Measure Impact
- Internal DevX increasingly important
- Open Source Project
