Pipelines

Hate them.

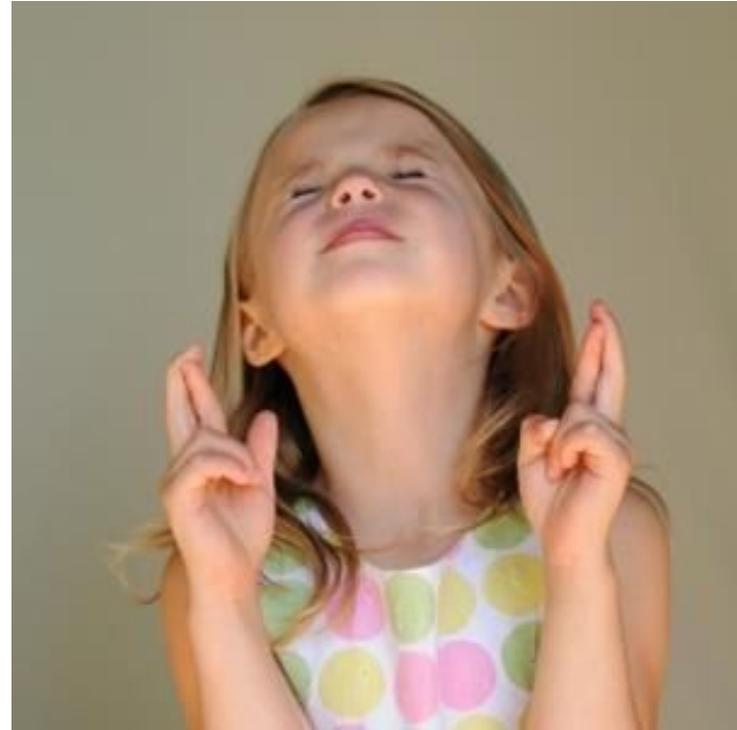

I SEE YOU'RE CREATING A PIPELINE

LET ME HELP YOU WITH THAT

**KEEP
CALM
AND
CROSS YOUR
FINGERS**

3 Golden Rules for Pipelines

KubeCon

CloudNativeCon

Europe 2018

1. Pipelines as code
2. Never store credentials in the code
3. Testing built in

What is Brigade?

KubeCon

CloudNativeCon

Europe 2018

brigade = event-driven scripting for kubernetes

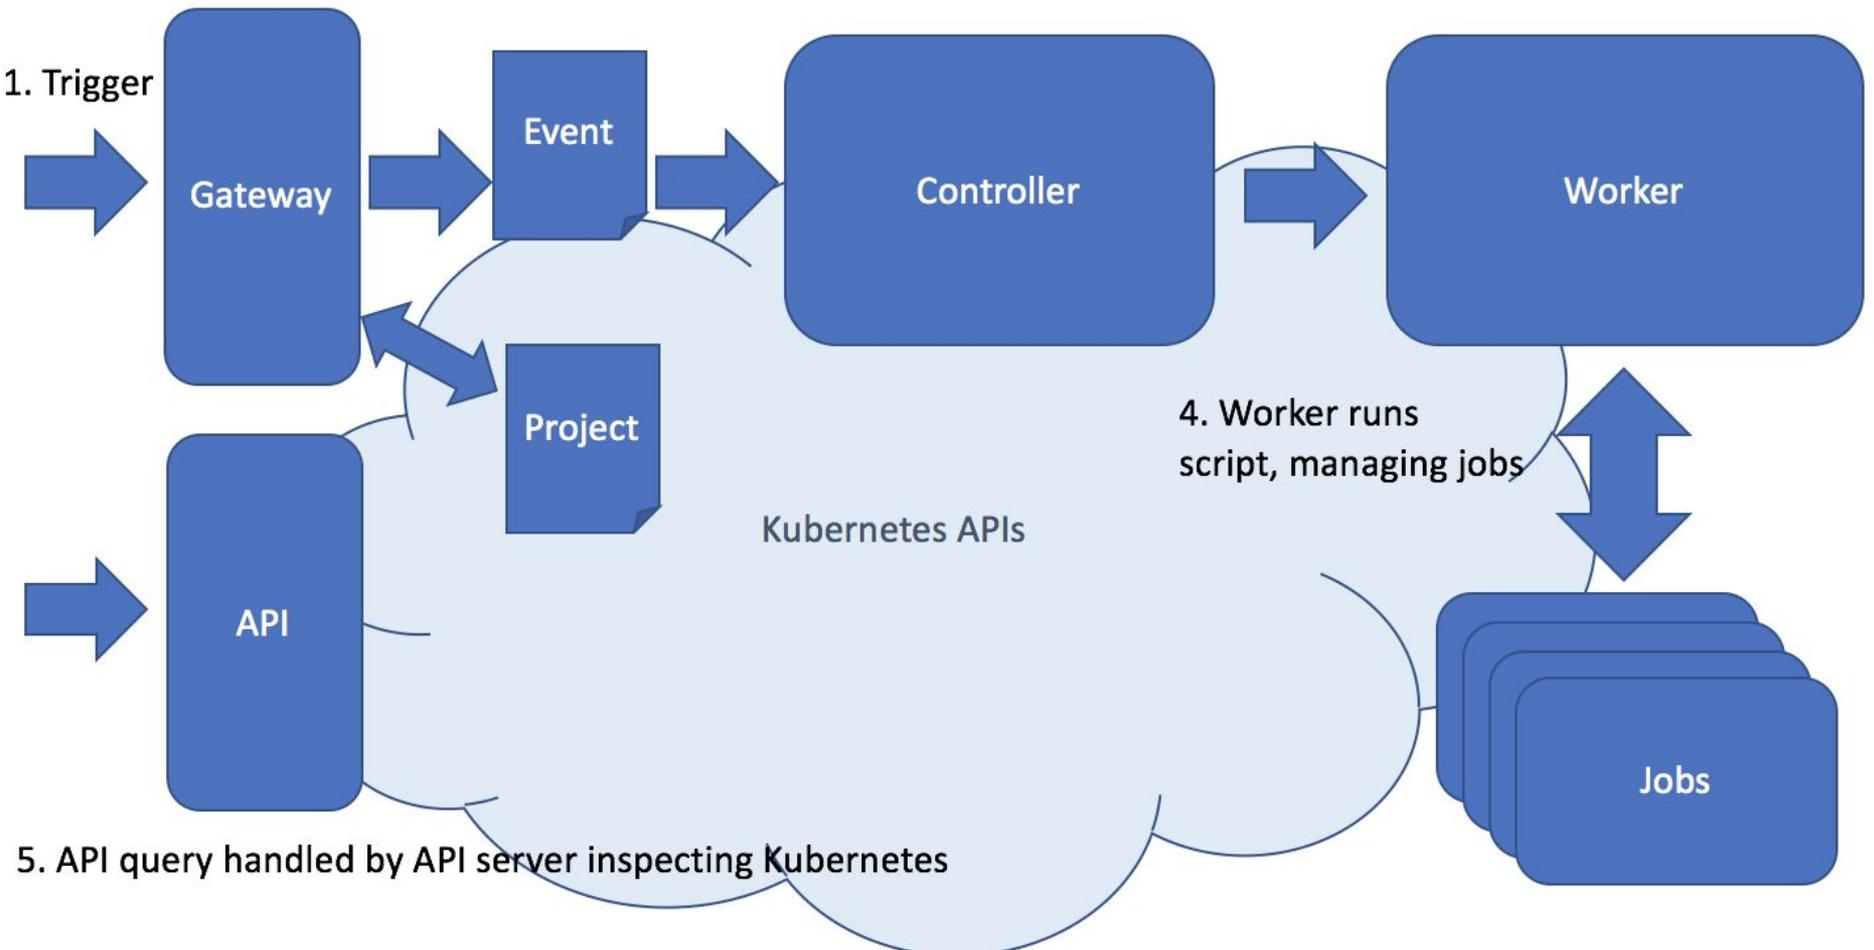

- ❑ encapsulate functions in containers
- ❑ run in parallel or serial
- ❑ trigger workflow from Github, Docker registry, etc.
- ❑ javascript (pipeline as code)
- ❑ project config stored as secrets
- ❑ well suited for CI/CD pipelines

2. GW loads project, creates event.

3. Controller reads event, creates worker

1. Trigger

4. Worker runs script, managing jobs

5. API query handled by API server inspecting Kubernetes

Time for live coding...
