What is cross-cloud?

KubeCon

CloudNativeCon

Europe 2018

What is cross-cloud?

- An open source, multi-cloud, Kubernetes provisioner
- <https://github.com/crosscloudci/cross-cloud>

What is cross-cloud?

KubeCon

CloudNativeCon

Europe 2018

What does cross-cloud do?

- Deploys vanilla-upstream Kubernetes to public/private clouds and bare metal with support for cloud specific feature flags.
- Optionally, runs conformance tests against the provisioned K8s cluster.

What are cross-cloud's goals?

KubeCon

CloudNativeCon

Europe 2018

Goals:

- To provide a vendor neutral, community maintained, vanilla Kubernetes provisioning solution which supports deployments across cloud providers, private clouds and bare metal with independent, Kubernetes interoperability testing results for end-users.

Who is cross-cloud's audience?

KubeCon

CloudNativeCon

Europe 2018

Audience:

- Groups wanting to install their own Kubernetes clusters:
 - in hybrid environments (cloud + metal)
 - across multiple cloud providers
 - in private environments (e.g. OpenStack installations)
- An interested party can confidently support multiple target environments using upstream Kubernetes and run conformance tests to validate the installation.

How does cross-cloud work?

Live Demo: cross-cloud provisioning for GCE

How does cross-cloud work? (steps)

KubeCon

CloudNativeCon

Europe 2018

Steps for cross-cloud provisioning VMs or bare metal:

- **Allocates resources and provisions environment with a provider**
 - eg. VMs, load balancer, security groups
- **Deploys specified version of vanilla K8s into provisioned environment with configuration requested**
 - eg. CNI version, DNS for services and pods
- **Optionally: runs conformance tests on the new cluster**

Cross-cloud technology overview

KubeCon

CloudNativeCon

Europe 2018

Cross-cloud provisioning uses:

- Terraform
- Cloud-init
- Vanilla Kubernetes

Why don't we use [enter tech here]?

How to collaborate?

KubeCon

CloudNativeCon

Europe 2018

- **Attend CI WG meetings:**
 - <https://github.com/cncf/wg-ci>
- **Post to the CI Public Discussion Group:**
 - cncf-ci-public@lists.cncf.io
- **Subscribe to the CNCF CI public mailing list:**
 - <https://lists.cncf.io/g/cncf-ci-public>
- **Create issues/PRs on GitHub:**
 - <https://github.com/crosscloudci/cross-cloud/issues>
- **Review KubeCon Cross-cloud CI Intro Slides:**
 - <https://kccnceu18.sched.com/event/DrnT/cncf-cicd-wg-intro>
