# Kata Containers: Getting started with the Kata community

# Contents

Project Overview

Status

Contributing

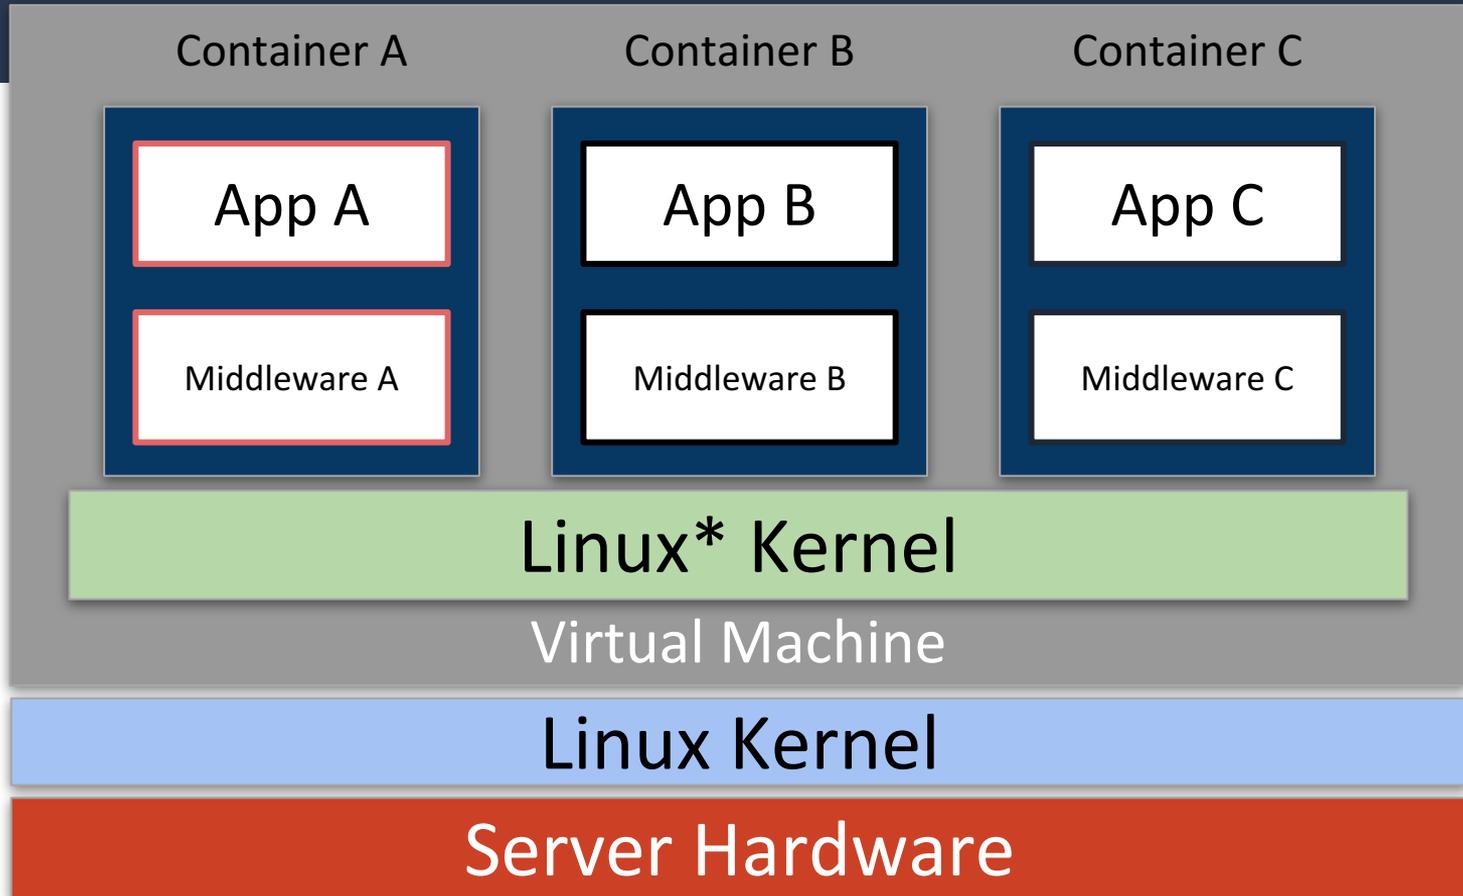

The speed of containers,  
the security of VMs

What's the problem  
we're trying to solve?

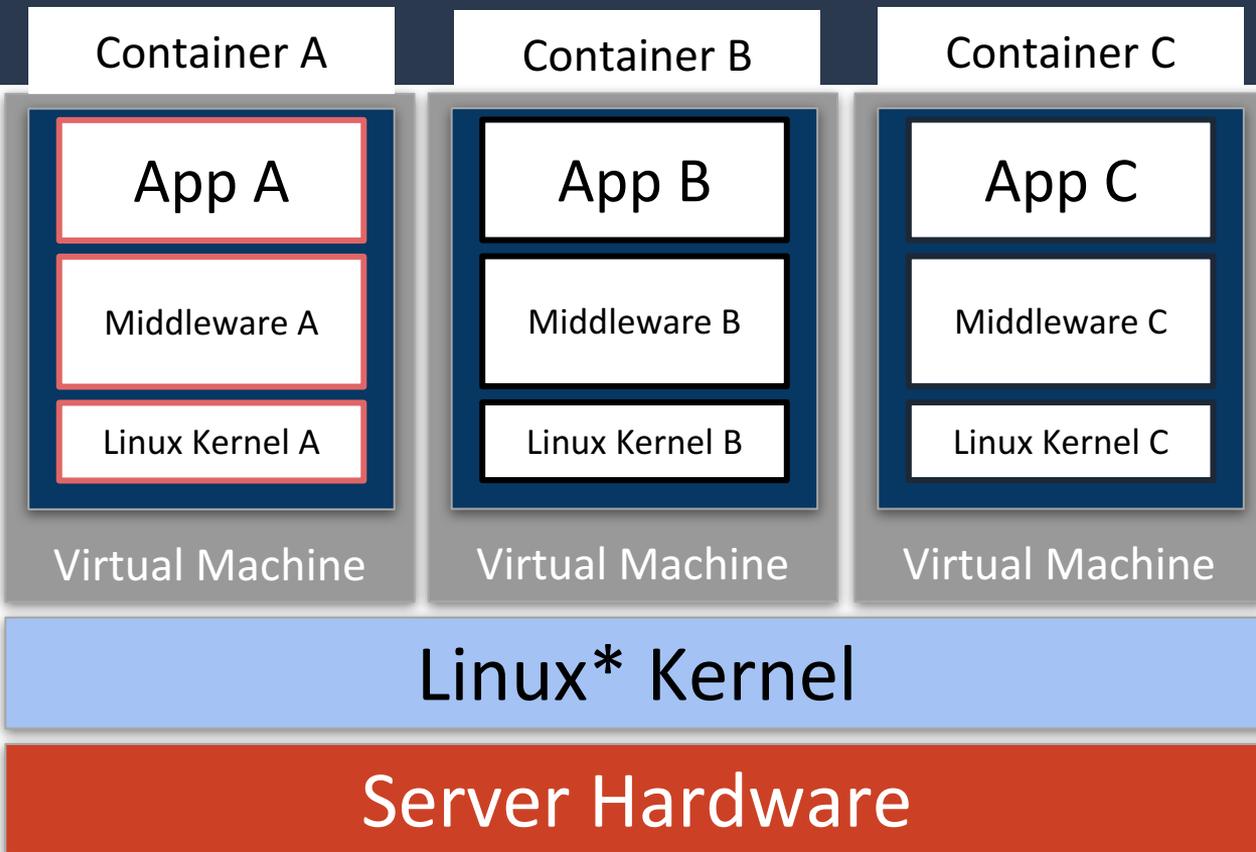

# Traditional Containers

\*Other names and brands may be claimed as the property of others.

# Kata Containers

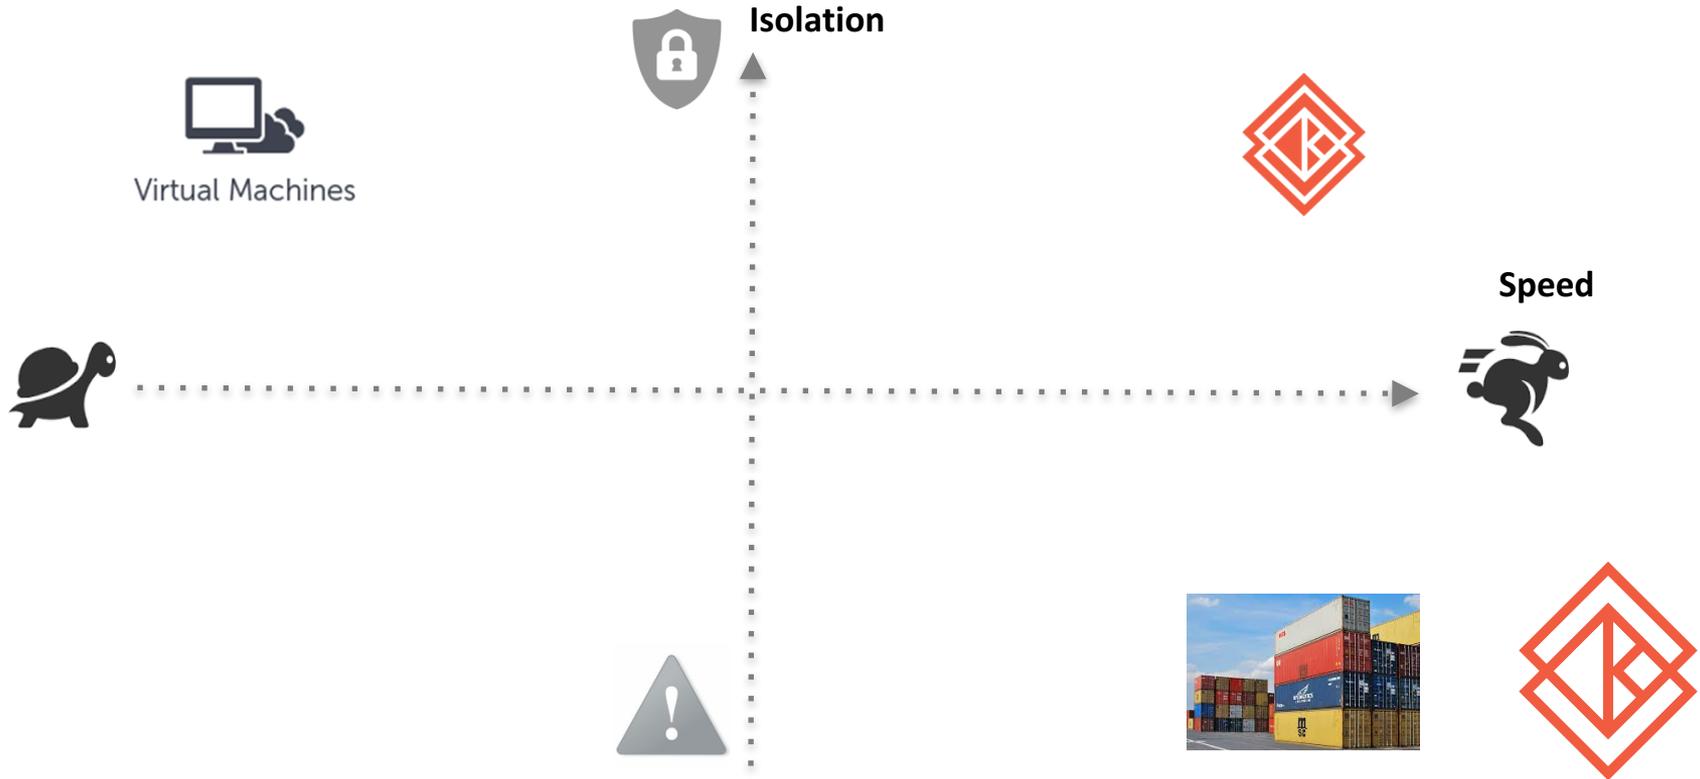

- Each container/pod is hypervisor isolated
- Seamless integration with the container ecosystem and management layers

\*Other names and brands may be claimed as the property of others.

# Speed vs Security

# History

- Hyper runV + Intel Clear Containers
- Virtualized containers to get security of VMs with container performance
- Donated code to the OpenStack Foundation for governance
- Open sourced current code base

# Technical Vision

- Light and fast VM-based containers
- OCI compatible container runtime
- No container packaging changes
- Seamless integration with Kubernetes (CRI) and Docker
- CRI compatible APIs
- Seamless integration with all major networking plugins
- Support multiple architectures
- Support multiple hypervisors

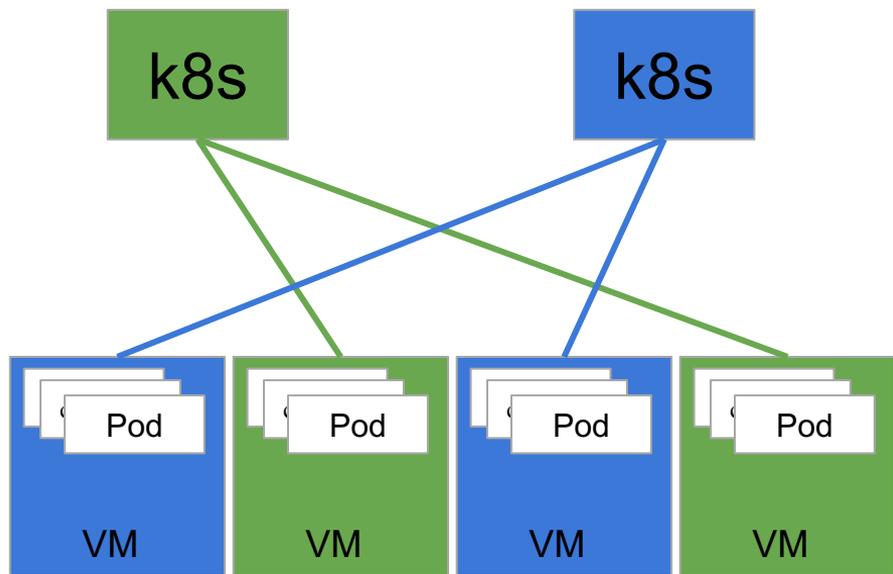

# Kata Containers sweet spots

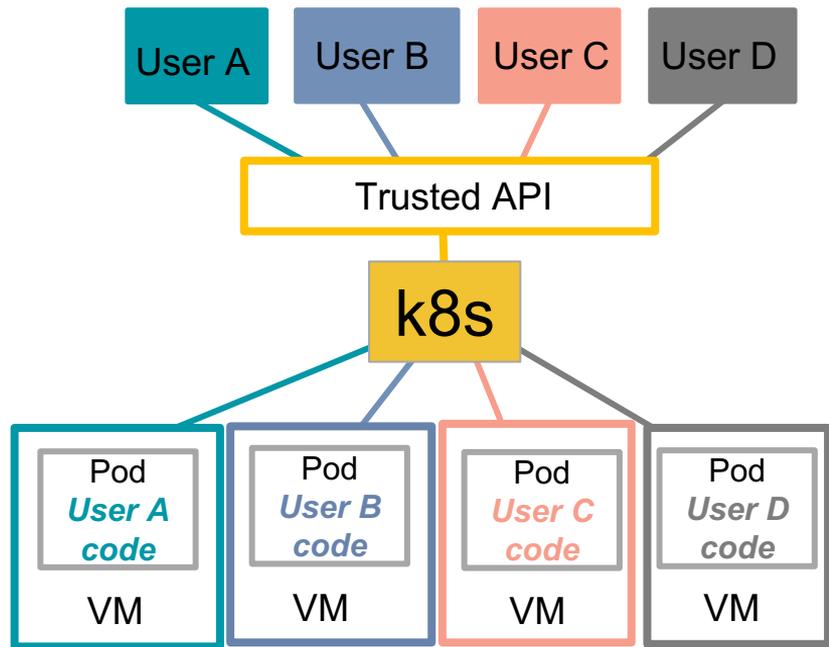

- Regulated and sensitive production environments
- Mixed workloads production environments
- Multi tenants container clusters
- Bare metal infrastructure
- Legacy workloads with kernel-dependent features

# Multi-tenant Kubernetes\*

IaaS

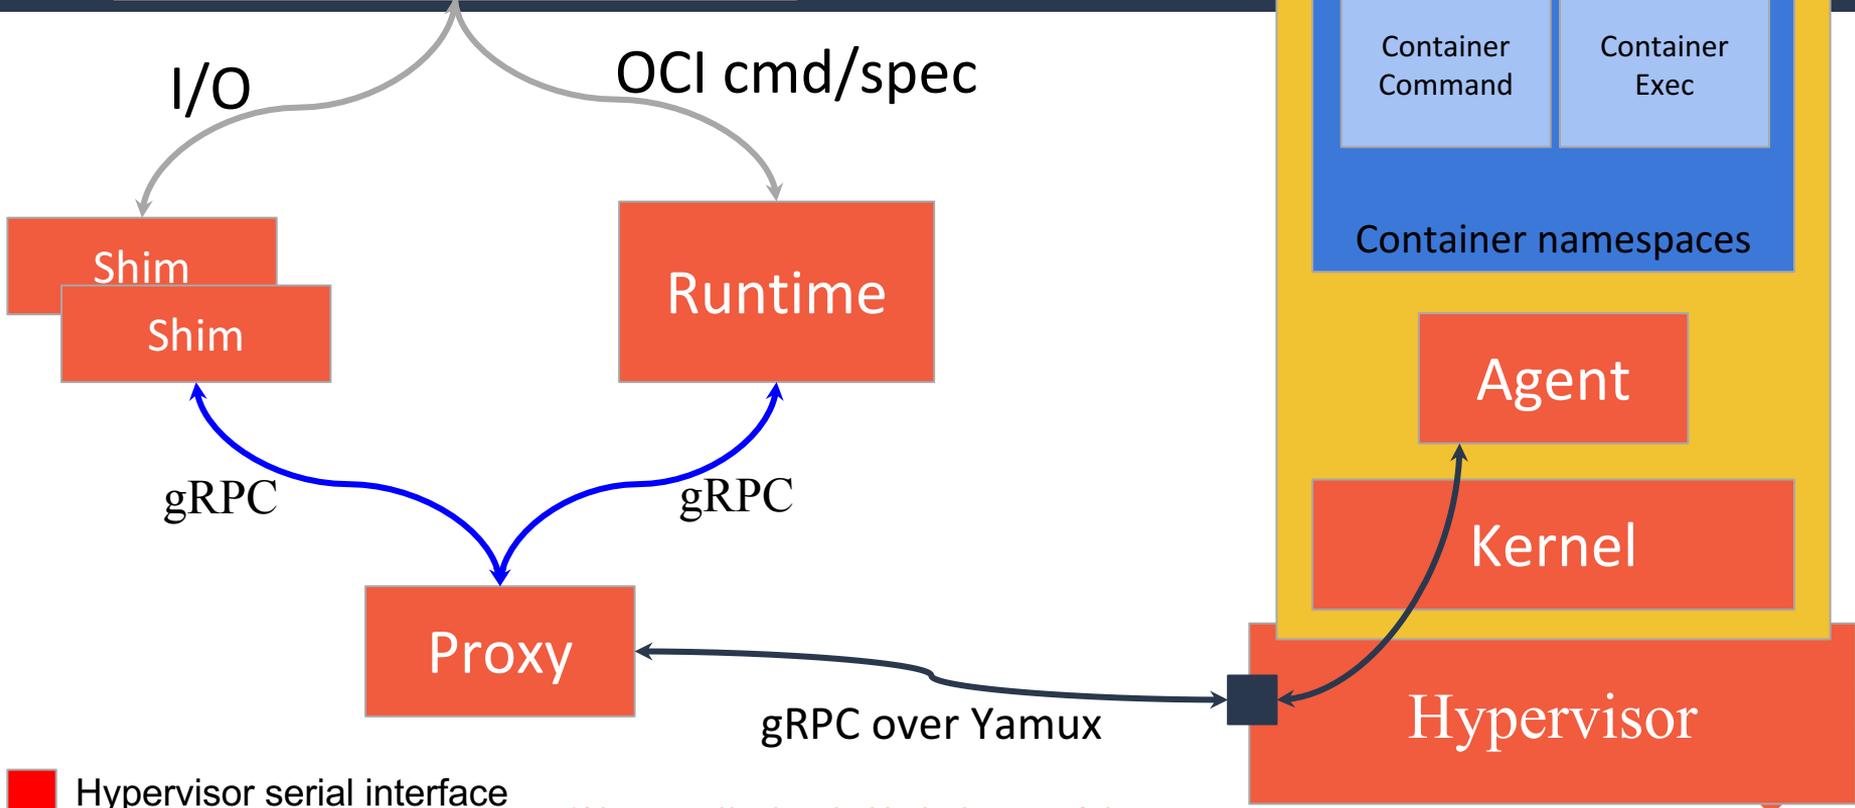

SaaS

\*Other names and brands may be claimed as the property of others.

# Kata Components

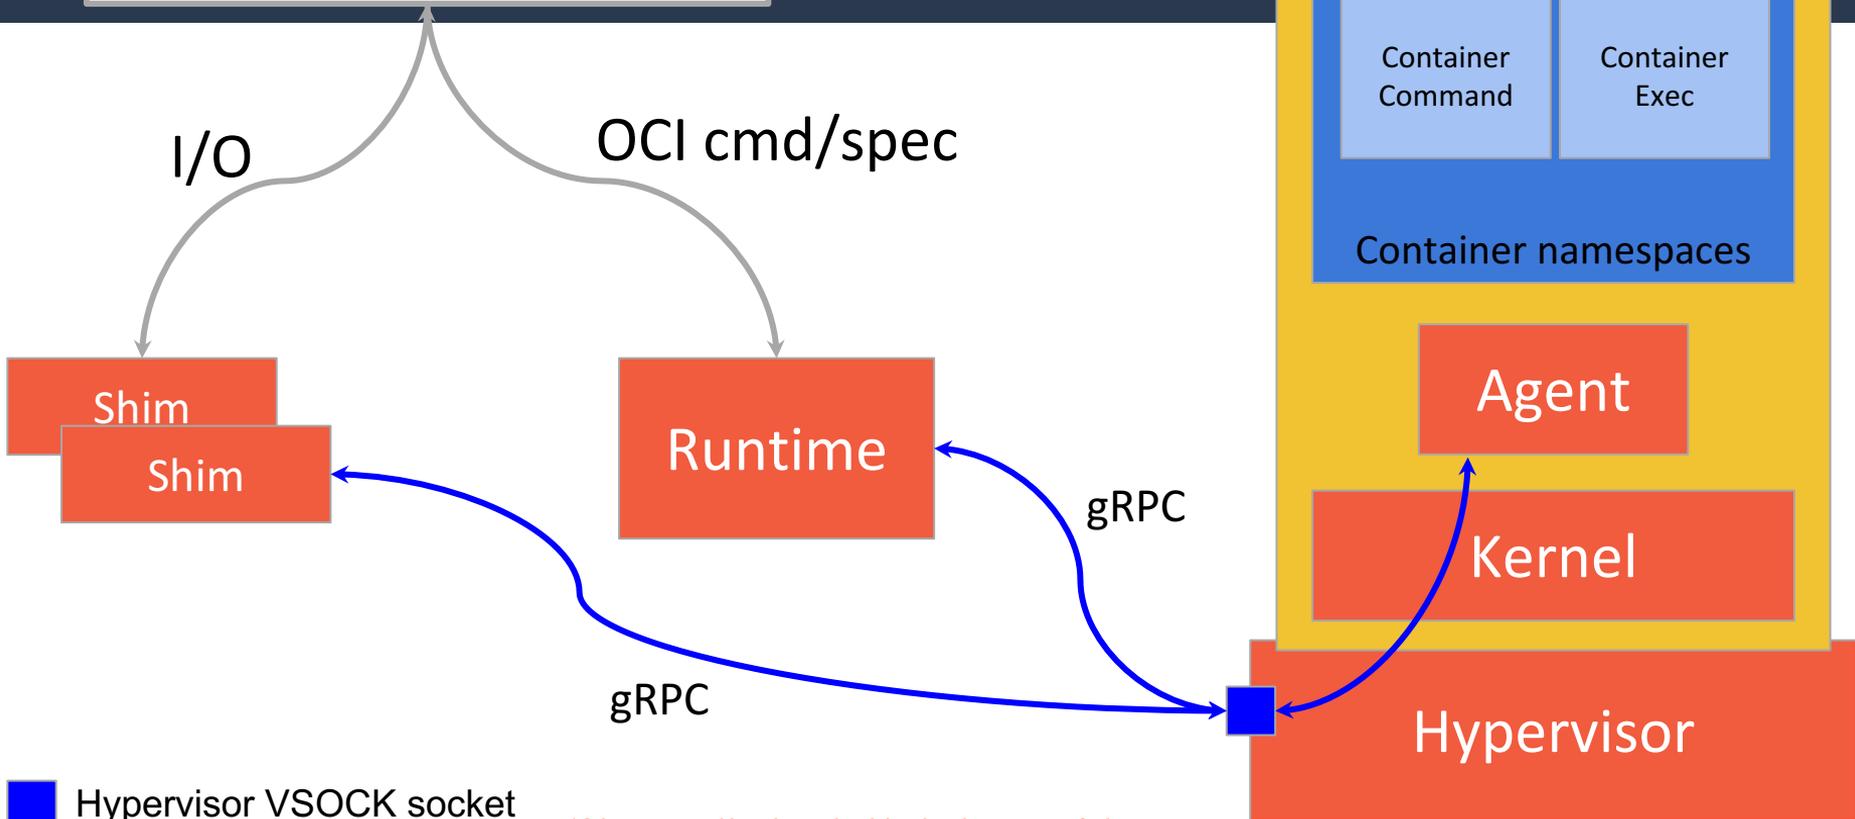

- Agent
- Proxy
- Shim
- Kernel
- QEMU package
- Runtime

 Hypervisor serial interface

\*Other names and brands may be claimed as the property of others.

■ Hypervisor VSOCK socket

\*Other names and brands may be claimed as the property of others.

# Project Status

May 22: 1.0.0 release

- Clear Containers and runV merged into single implementation
- Has surpassed capabilities of CC 3.0; close to runV
- CRI integration: Frakti, CRI-O, containerd-cri
- Full documentation (including upgrade paths for existing runV and CC users)

# Give Kata a Try

- Dev Guide
  - [github.com/kata-containers/documentation](https://github.com/kata-containers/documentation)

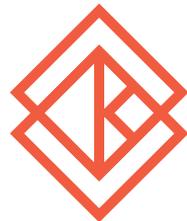

# You can contribute

- Contributor Guide
  - [github.com/kata-containers/community](https://github.com/kata-containers/community)
- Things to know:
  - Project written in Go
  - Apache 2.0 license (same as K8s)
  - Use Signed-off-by from the Linux kernel community

# Contribution Areas

- “Help wanted” and “Good first issue” labels in GitHub
- Tests
  - Jump into the /test repo
- Docs
  - Reviewers, editors

# Contribution Areas

- Feature requests
  - What's your use case?
  - File a GitHub issue

# Contribution Areas

- Community engagement
  - Spread the word
    - Meetup talks, host a Kata speaker at your Meetup
    - Demo Kata for your organization
  - Content
    - Blogs, demos

# Contribution Areas

- Future release planning at the OpenStack Summit Vancouver, May 21-24
- Organizing for 1.1.0 and future features
- Community development
