Plugins

Plugin types

- External plugin:
 - Maintained externally
 - Link through coredns.io
- CoreDNS subproject:
 - Separate repo under CoreDNS organization
 - Issue and PR tracking outside the core repo
- Core plugin (CoreDNS repo)
 - More selective in quality
 - CoreDNS repo (incl. OWNERS)

Hidden Primary

Hidden Primary

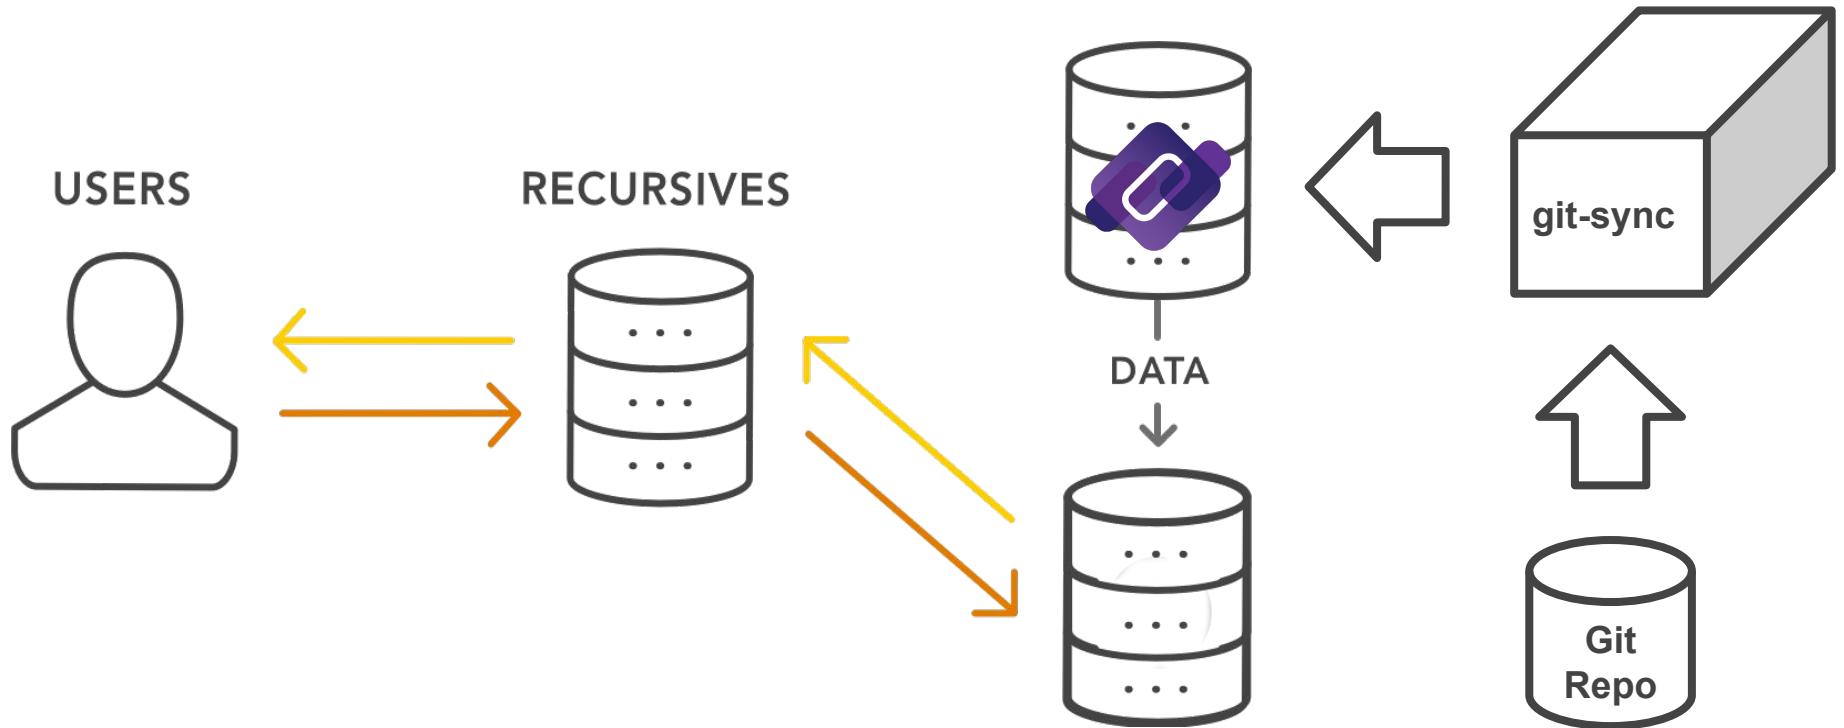

Recap: SOA

```
example.com 3600 IN SOA ns.example.com. domains.example.com. (  
                      2018120406 ; serial  
                      5m       ; refresh  
                      5m       ; retry  
                      1w       ; expire  
                     12h     ) ; minimum (negative caching)
```

CoreDNS

Git based DNS

Jumping into Code

Demo Plugin

- <https://github.com/coredns/demo>
- Source IP based service discovery
 - Returns "**1.1.1.1**" for 172.0.0.0/8 or 127.0.0.0/8
 - Returns "**8.8.8.8**" otherwise

Three Functions

setup.go

init()

- Performs one-time initializations, register the setup function with Caddy

setup(c *caddy.Controller) error

- Parses the configuration from the file and captures it in a struct
- Adds the handler to the Config object (represents a stanza)
- Called once for each use of the plugin in the Corefile

demo.go

ServeDNS(context.Context, dns.ResponseWriter, *dns.Msg) (int, error)

- Processes the DNS request and returns a response, or passes it down the chain

Demo Plugin: Setup

```
func init() {
    caddy.RegisterPlugin("demo", caddy.Plugin{
        ServerType: "dns",
        Action:     "setup",
    })
}

func setup(c *caddy.Controller) error {
    c.Next() // 'demo'
    if c.NextArg() {
        return plugin.Error("demo", c.ArgErr())
    }
    dnsserver.GetConfig(c).AddPlugin(func(next plugin.Handler) plugin.Handler {
        return Demo{next}
    })
    return nil
}
```

CoreDNS

Demo Plugin: ServeDNS Part 1

```
// ServeDNS implements the plugin.Handler.ServeDNS.  
func (p Demo) ServeDNS(ctx context.Context, w dns.ResponseWriter, r *dns.Msg) (int, error) {  
    state := request.Request{W: w, Req: r}  
    qname := state.Name()  
    reply := "8.8.8.8"  
    if strings.HasPrefix(state.IP(), "172.") || strings.HasPrefix(state.IP(), "127.") {  
        reply = "1.1.1.1"  
    }  
    fmt.Printf("Received query %s from %s, expected to reply %s\n", qname, state.IP(), reply)  
    ...  
}
```

Demo Plugin: ServeDNS Part 2

```
func (p *Demo) ServeDNS(ctx context.Context, w dns.ResponseWriter, r *dns.Msg) (int, error) {
    ..
    rr := new(dns.A)
    rr.Hdr = dns.RR_Header{Name: qname, Rrtype: dns.TypeA, Class: dns.ClassINET}
    rr.A = net.ParseIP(reply).To4()
    answers = append(answers, rr)
    m := new(dns.Msg)
    m.SetReply(r)
    m.Authoritative = true
    m.Answer = answers

    w.WriteMsg(m)
    return dns.RcodeSuccess, nil
}
```

Demo Plugin: Corefile

```
.:1053 {
    # By default all plugins are disabled initially,
    # unless enabled explicitly
    #
    # demo
}
```

CoreDNS

Demo Plugin: Build

```
# add demo:demo to plugin.cfg
# build with docker, if you don't have your go env
# setup already (golang:1.11)
$ docker run --rm -i -t -v \
  $PWD:/go/src/github.com/coredns/coredns \
  -w /go/src/github.com/coredns/coredns \
  golang:1.11 make
# configure Corefile and run coredns
$ ./coredns
$
```

Outlook

Metadata, Rewrites and Logging

KubeCon

CloudNativeCon

North America 2018

- Metadata plugin
- Enables plugins to publish data about a request
- Currently metadata is consumed by rewrite and log
- Future
 - Template plugin to consume metadata
 - Firewall plugin to consume metadata
 - Kubernetes plugin as a `metadata.Provider`

CoreDNS

Roadmap

- Upcoming plugins
 - Firewall
 - Kubernetes external zones
 - Response Rate Limiting (new contributor volunteered ☺)
- Kubernetes + metadata
- External policy engine integrations
- Directly writable API
- Performance optimizations (especially GRPC)
- New external plugins (ideas?)

Contributing

Contributions Welcome

- Github: <https://github.com/coredns/coredns>
- Slack: #coredns on <https://slack.cncf.io>
- Used in production? Add yourself to **ADOPTERS.md**
- Contribute documentation, code or external plugins
