BRIGADE

Event-driven scripting for
Kubernetes

@matei_radu

Who am I?

KubeCon

CloudNativeCon

Europe 2019

Radu M (@matei_radu, <https://radu.sh>)

- piano enthusiast
- open source maintainer for Brigade, CNAB
- software engineer @Microsoft (Deis Labs 🧡)

@matei_radu

Agenda

KubeCon

CloudNativeCon

Europe 2019

- advanced scripting guide
- how does Brigade work?
- building custom gateways
- securing Brigade
- dependencies in brigade.js
- testing Brigade scripts

@matei_radu

Kubernetes as a “cloud OS”

KubeCon

CloudNativeCon

Europe 2019

An operating system manages **processes on a machine.**

Kubernetes manages **containers on a cluster.**

@matei_radu

Operating System Shell Scripting

KubeCon

CloudNativeCon

Europe 2019

Flow control that wraps the execution of **processes**, but is not opinionated about what the **process** do, or how they run.

Operating System Shell Scripting

KubeCon

CloudNativeCon

Europe 2019

```
#!/bin/bash

for i in $( ls -1 ); do
    if [[ -d $i ]]; then
        echo "$i is a directory"
    fi
done
```

@matei_radu

Cluster Shell Scripting?

KubeCon

CloudNativeCon

Europe 2019

Flow control that wraps the execution of **containers**, but is not opinionated about what the **containers** do, or how they run.

Cluster Shell Scripting

KubeCon

CloudNativeCon

Europe 2019

```
for i in $( run_some_container ); do
    if $( run_some_other_container ); then
        $( run_yet_another_container )
    fi
done
```

@matei_radu

BRIGADE

What is Brigade?

KubeCon

CloudNativeCon

Europe 2019

- CNCF Sandbox Project

CLOUD NATIVE
SANDBOX

BRIGADE

The Brigade logo graphic, which consists of the word 'BRIGADE' in a bold, blue, sans-serif font. Above and below the letters are stylized blue icons of people with arms raised, connected by dashed lines, forming a circular shape around the text.

@matei_radu

What is Brigade?

KubeCon

CloudNativeCon

Europe 2019

- framework for event-driven scripting on Kubernetes
- extremely lightweight, Kubernetes native
- chain together containers to create workflows

@matei_radu

It's just JavaScript

KubeCon

CloudNativeCon

Europe 2019

```
const { events, Job } = require("brigadier")

events.on("someEvent", ( eventData ) => {
  var program = Job("one", "alpine:3.5")
  program.tasks = [ "echo hello", "echo goodbye" ]

  program.run()
})
```

How does Brigade work?

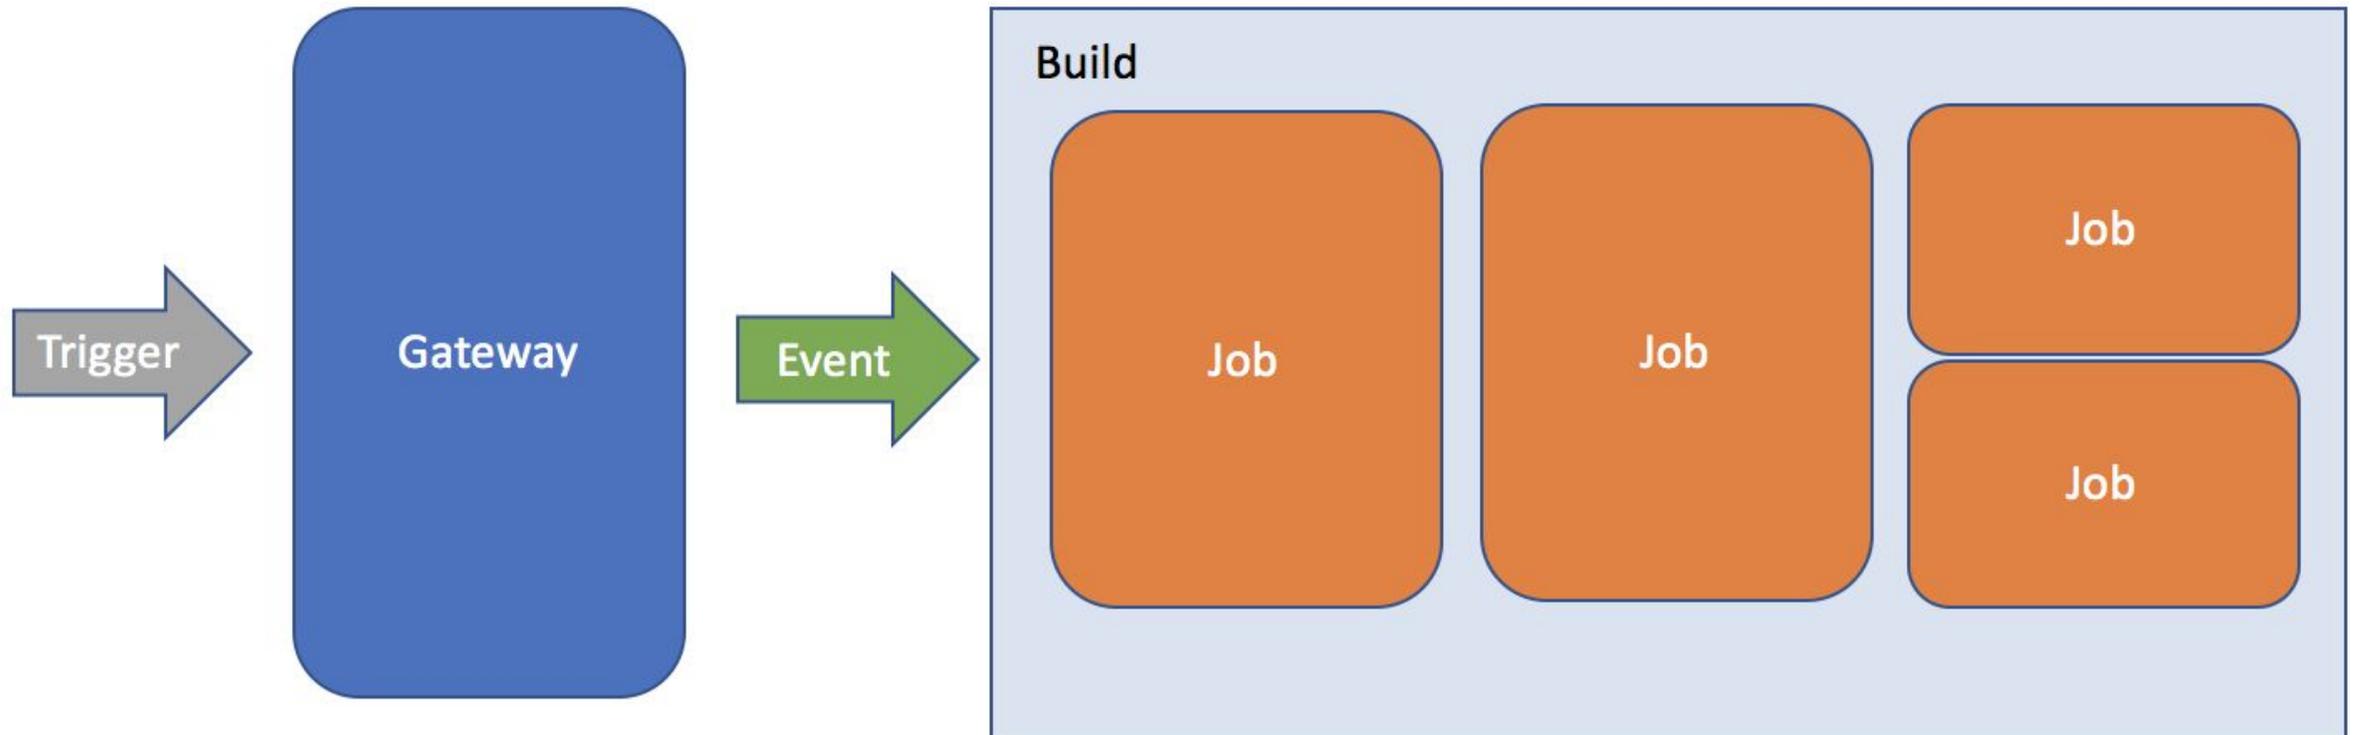

KubeCon

CloudNativeCon

Europe 2019

@matei_radu

Components

KubeCon

CloudNativeCon

Europe 2019

- **gateways** -- translate events from inside or outside the cluster into Brigade “builds”
- **controller** -- listens for events and creates worker pods
- **worker pods** -- execute the JavaScript pipeline and schedules jobs
- **API (optional)** -- used to interact with Brigade from web or CLI components

How does Brigade work?

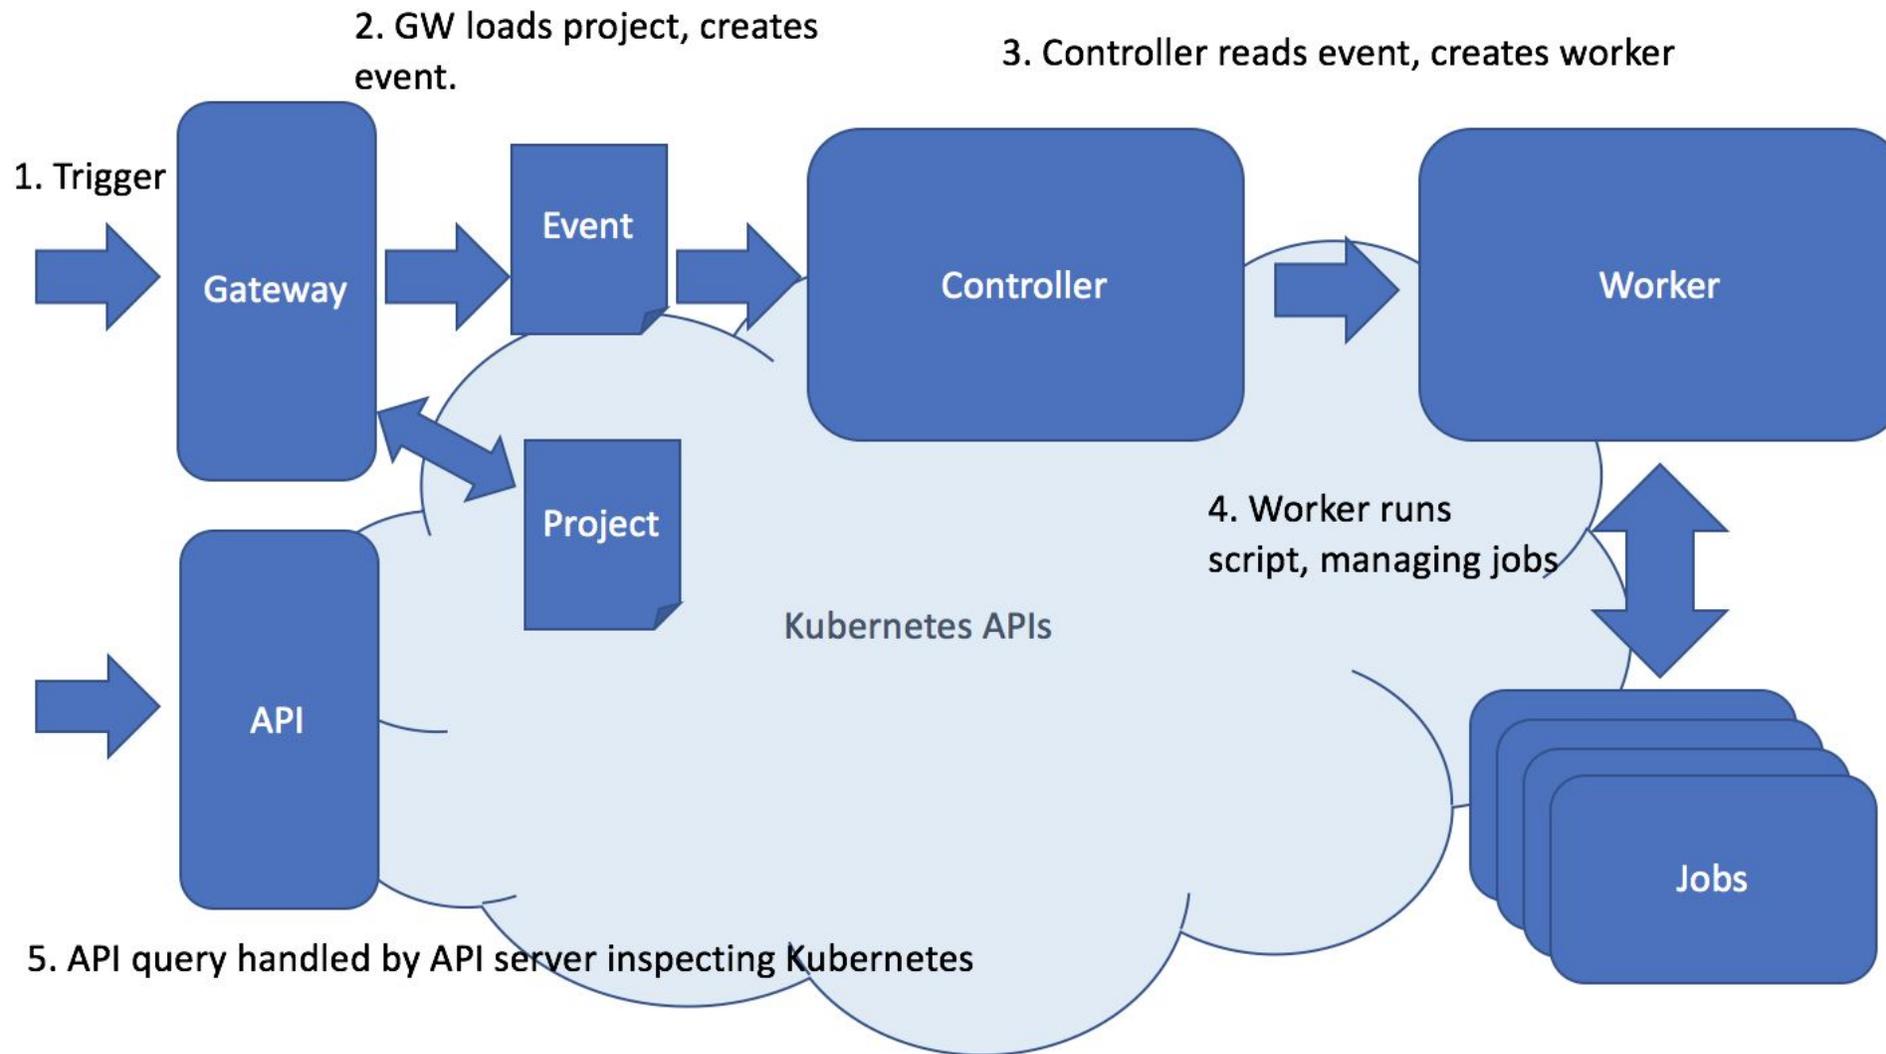

KubeCon

CloudNativeCon

Europe 2019

Gateways

docs.brigade.sh/topics/gateways

KubeCon

CloudNativeCon

Europe 2019

- translate events from outside the cluster
- **out-of-the-box**: generic gateway (arbitrary JSON and CloudEvents), container registry, GitHub
- they can be webhooks, but any application that can create a Kubernetes secret can be a gateway (brig exec acts like a gateway)
- examples for Go, NodeJS, Bash, Python

@matei_radu

KubeCon

CloudNativeCon

Europe 2019

Demo

Building custom gateways

Security

[\(docs.brigade.sh/topics/security\)](https://docs.brigade.sh/topics/security)

KubeCon

CloudNativeCon

Europe 2019

- isolate Brigade in a namespace
- use RBAC (enabled by default)
- always use HTTPS for exposed services (docs.brigade.sh/topics/ingress)
- always use trusted container images in jobs
- always validate and authenticate events

@matei_radu

Dependencies in brigade.js

[\(docs.brigade.sh/topics/dependencies\)](https://docs.brigade.sh/topics/dependencies)

KubeCon

CloudNativeCon

Europe 2019

- import local JavaScript modules from the same repo
- import packages from NPM (pulled on event)
- build a custom worker image with the added dependencies
(docs.brigade.sh/topics/workers)
- BUT - avoid putting *too much* logic in brigade.js, and when possible, start jobs with that logic

@matei_radu

CloudNativeCon

Europe 2019

Demo

Dependencies in `brigade.js`

Testing Brigade scripts

docs.brigade.sh/topics/testing

KubeCon

CloudNativeCon

Europe 2019

- brigtest (github.com/technosophos/brigtest)
 - checks if brigade.js is properly formatted and execute unit tests
 - does not run jobs, does not need Kubernetes
- Brigade Integration Test (github.com/blimmer/brigade-project-integration-test)
 - integration testing, using Minikube
 - automatically configures Brigade, creates a project, invokes events, and tests the output

Community + Integrations

KubeCon

CloudNativeCon

Europe 2019

- built-in support for CloudEvents (CNCF)
- integration with GitHub Checks API
- integrations with Prometheus and Virtual Kubelet (CNCF)
- support for arbitrary event data with a generic gateway

BRIGADE

Questions & Answers

@matei_radu

- Brigade is a cluster scripting environment that allows you to chain multiple containers and create workflows and pipelines
- lightweight, and works on **any Kubernetes cluster**
- write scripts in basic JavaScript
- Brigade is a Kubernetes application - you can manage and monitor it the same way as any other application
- Brigade is a CNCF Sandbox Project, stable at v1.0.0

FAQ - Declarative?

KubeCon

CloudNativeCon

Europe 2019

- Brigade is a cluster scripting environment - so a real programming language is required
- But... it is easy to create pipelines with Brigade
- we are actively investigating adding support for declarative pipelines (YAML, **HCL**), and there are already multiple declarative implementations for Brigade (community-driven)

Europe 2019

[WIP] Experimental Windows containers support #838

Draft radu-matei wants to merge 1 commit into `brigadecore:master` from `radu-matei:windows-entrypoint`

Member

What this PR does / why we need it:

This PR adds very early experimental Windows Server containers support.

It has been tested with a Virtual Kubelet node backed by Azure Container Instances, so the following are current known limitations:

- job and build caches are not supported (limitation of volumes in ACI)
- the Git sidecar is not supported (limitation of volumes in ACI)
- the entrypoint is passed directly to the command arguments, not constructed as a script (limitation of volumes in ACI)

FAQ - Brigade on ARM clusters

KubeCon

CloudNativeCon

Europe 2019

[WIP] Add ARM64 support #803

Open

Alexandr wants to merge 11 commits into `brigadecore:master` from `Alexandr:master`

Alexandr on 8 Feb

First-time contributor

What this PR does / why we need it: It adds ARM64 support to brigade, allowing it to run on ARM (and hybrid ARM64/AMD64) clusters.

If applicable:

- this PR contains documentation
- this PR contains unit tests
- this PR has been tested for backwards compatibility

No code changes have been performed, so it should not need unit tests, nor break backwards compatibility. It might warrant an update to docs just to say it supports ARM though?

Resolves [#773](#)
