Agenda

KubeCon

CloudNativeCon

Europe 2019

- Canary deployment state of the art
- Kanary presentation and advantages
- Demo
- On the code side

Canary deployment in kubernetes

KubeCon

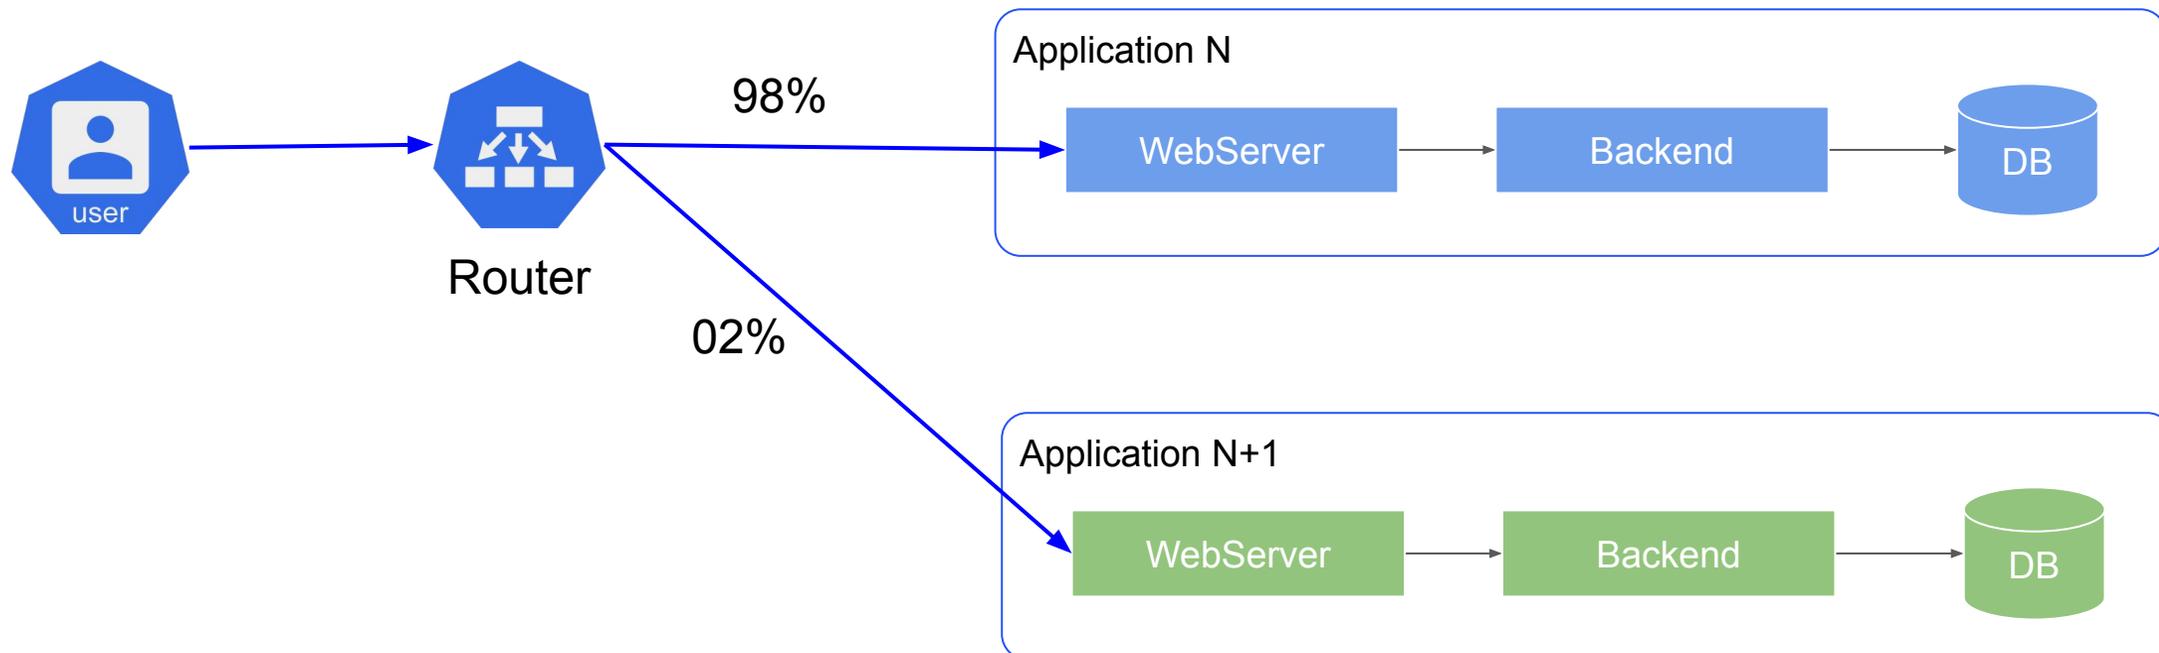

CloudNativeCon

Europe 2019

Canary Deployment is a technique to reduce the risk of introducing a new software version in production by slowly rolling out the change to a small subset of users before rolling it out to the entire infrastructure and making it available to everybody.

Canary deployment in kubernetes

KubeCon

CloudNativeCon

Europe 2019

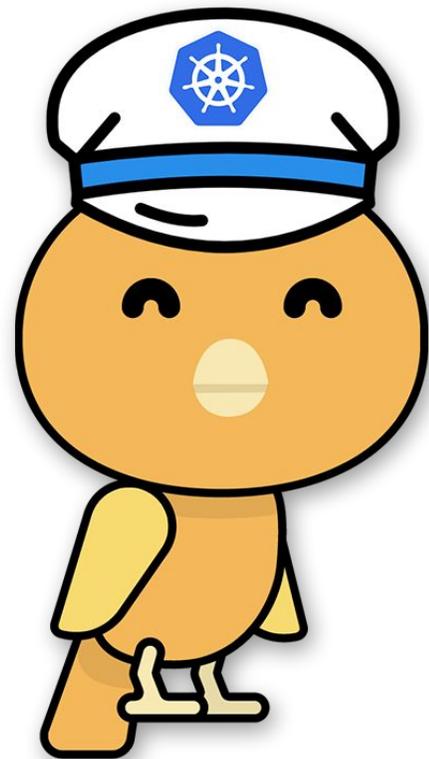

Available solutions:

- Based on your own scripts, jenkinsfiles, (OCP custom deployer)...
- Canary As A Service (code fresh or other)
- Spinnaker deployment canary solution

Kubernetes native solution ?

- Benefit from K8s extensibility (CRD, Admission Controller)
- Benefit with other K8s ecosystem components: Istio, Prometheus

=> [Flagger.app](#)

Kanary Advantages:

- K8s native solution
- Preserve Deployment history
- Allow parallel canary deployments
- Istio and Prometheus are not mandatory

But we can use them :-)

Canary deployment in kubernetes

KubeCon

CloudNativeCon

Europe 2019

- **Canary scale:** fix replicas | % replicas | HorizontalPodAutoscaling
- **Traffic management:** no traffic | % of live traffic | test traffic
tagged traffic | shadow traffic (istio require)
- **Validation:** manual | labelwatch | promql | metrics-server
- **Rolling-Update:** dry-run | automatic update

Canary deployment in kubernetes

KubeCon

CloudNativeCon

Europe 2019

```
apiVersion: kanary.k8s.io/v1alpha1
kind: CanaryDeployment
metadata:
  name: nginx
  labels:
    app: nginx
spec:
  serviceName: nginx
  deploymentName: nginx
  scale:
    static:
      replicas: 1
  traffic:
    source: <[service|kanary
  validation:
    items:
      - manual:
          statusAfterDeadline
  template:
    # deployment template
```

```
validations:
  initialDelay: 20s
  items:
    - promQL:
        allPodsQuery: true
        podNamekey: pod
        prometheusService: prometheus:9090
        query: "histogram_quantile(0.99, ...) by (le)"
        valueInRange:
          max: 0.31
          min: 0
    maxIntervalPeriod: 10s
    validationPeriod: 1m0s
```

Kanary presentation and advantages

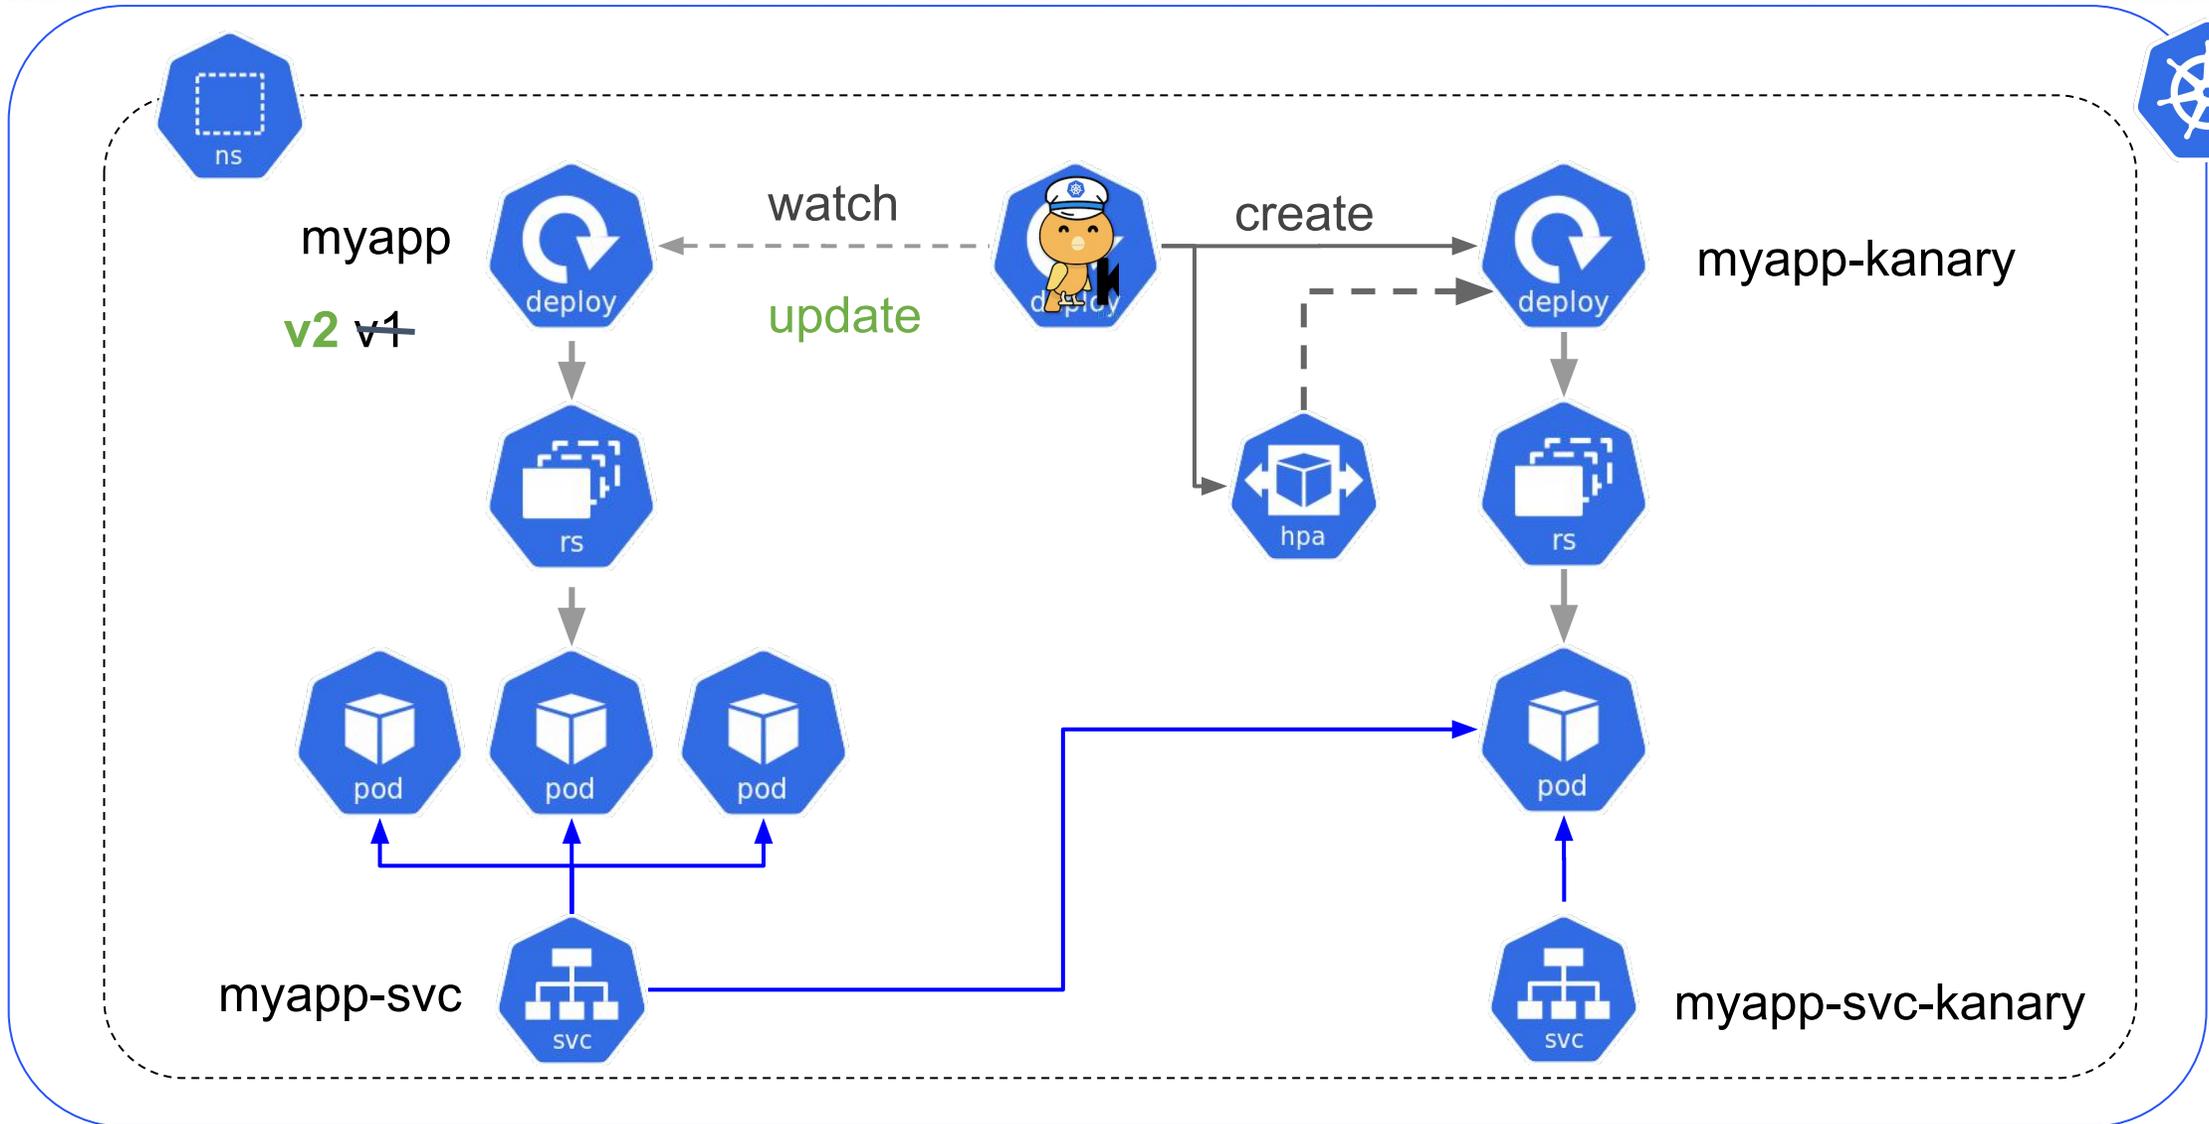

KubeCon

CloudNativeCon

Europe 2019

How we build it

KubeCon

CloudNativeCon

Europe 2019

OPERATOR
SDK

- **Speeds up the development solution**
 - bootstrap project
 - focus on operator logic
 - simplify testing
- **Missing features (yet)**
 - Custom Resource validation [#1217](#)
 - Custom Resource version conversion [#?](#)

How we build it

KubeCon

CloudNativeCon

Europe 2019

```
$ mkdir -p $GOPATH/src/github.com/amadeusitgroup/ && cd ...
```

```
$ operator-sdk new kanary && cd kanary
```

```
$ operator-sdk add api --api-version=kanary.k8s.io/v1alpha1  
--kind=KanaryDeployment
```

```
$ operator-sdk add controller  
--api-version=kanary.k8s.io/v1alpha1 --kind=KanaryDeployment
```

Operator skeleton: Reconcile

KubeCon

CloudNativeCon

Europe 2019

```
func (r *ReconcileKanaryDeployment) Reconcile(request reconcile.Request)
(reconcile.Result, error) {
    reqLogger := log.WithValues("Ns", request.Namespace, "KD", request.Name)
    reqLogger.Info("Reconciling KanaryDeployment")

    // Fetch the KanaryDeployment instance
    instance := &kanaryv1alpha1.KanaryDeployment{}
    err := r.client.Get(context.TODO(), request.NamespacedName, instance)

    // Build your logic here
    // ...

    return reconcile.Result{}, nil
}
```

Operator-sdk: some traps

KubeCon

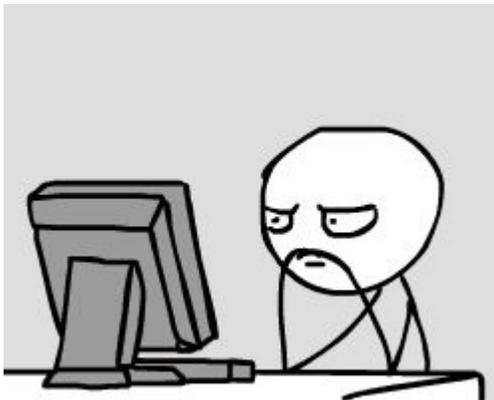

CloudNativeCon

Europe 2019

**OPERATOR
SDK**

- Status Sub-Resource, behaviour change between k8s version (v1.10)
- Invalid Custom Resource skipped
- Log level support

Operator-sdk: some tips

KubeCon

CloudNativeCon

Europe 2019

- For istio users, a controller usually do not expose services, so:

```
annotations:
```

```
  sidecar.istio.io/inject: "false"
```

- For e2e test using KinD, doing traffic injection:
kubect proxy + api master proxy api

```
"http://127.0.0.1:8001/api/v1/namespaces/e2e-ns/services/http:prometheus:9091/proxy"
```

- For demos using KinD, doing traffic injection:
kubect port-forward + ingress

Summary

KubeCon

CloudNativeCon

Europe 2019

- Canary Operator is ready for testing
- Future improvements:
 - Custom Metrics server support
 - Daemonset Canary testing
 - What do you need?
- It has never been so easy to create an Operator
 - Focus on the logic, not the boilerplate

Question ?
