# CNCF CI Intro:

KubeCon

CloudNativeCon

Europe 2019

The CNCF CI project consists of a CI testing system, status repository server and a dashboard -- `cncf.ci`.

The CI testing system validates the build and deployment of each CNCF project for any commit on stable and HEAD to x86 and Arm architectures on bare metal (Packet) servers.

The CNCF CI testing system can reuse existing artifacts from a project's preferred CI system or generate new build artifacts. The status repository server collects the test results and the dashboard displays them.

## Goals:

- To provide a third party, unbiased validation for CNCF Graduated and Incubating projects
- To promote CNCF hosted projects and attract more projects to CNCF
- To demonstrate the use of cloud native technologies
- To support and contribute to a sustainable and scalable project ecosystem
- To get feedback from cloud native end users and projects
- To compliment the CNCF landscape and trail map -- [l.cncf.io](https://l.cncf.io)

# Key Features

# Key Features

KubeCon

CloudNativeCon

Europe 2019

## 1. Highlight and validate CNCF Hosted Graduated and Incubating projects:

- Validate stable and HEAD releases of Graduated/Incubating projects
- Re-use build containers that are provided by a project's CI System
- Re-use upstream Helm charts
- Re-use end-to-end tests provided by projects

# Key Features

KubeCon

CloudNativeCon

Europe 2019

## 2. Increase collaboration with CNCF Project maintainers:

- Maintainers can update project and release details via GitHub PR
- Cncf.ci will integrate with external CI systems to retrieve a CNCF Project's build status and container artifacts
- Maintainers can provide Helm charts and smoke tests for deploy phase
- Maintainers can provide end-to-end tests for test phase

# Key Features

## 3. Validate projects in various Test Environments:

- Kubernetes Releases:
  - Stable
  - HEAD
  - *Future: Release Candidate*
- Architectures:
  - Arm
  - x86
- Bare Metal
  - Packet

# CNCF CI Dashboard Overview

KubeCon

CloudNativeCon

Europe 2019

## CI Dashboard Overview:

- Overview of [cncf.ci](https://cncf.ci)
  - Refreshes daily at 3:00am Eastern Time
  - Provisions Test Environments for K8s release and architecture
  - Shows status of K8s Provisioning to Packet
  - Supports status of Build, App Deployments and e2e testing per project
  - Clicking on Build status badge opens CI system build job URL
  - Clicking on Release Name opens project's GitHub commit URL
  - Clicking on Deploy status badge opens “provisioning/app-deploy” job URL

# Testing System Overview

KubeCon

CloudNativeCon

- **Provisioning the K8s Test Environment**
- **Build pipeline per project** (optional, can use project's build artifacts)
- **App deployment pipeline per project**
- **E2e testing stage per project**

# Provisioning K8s test environment

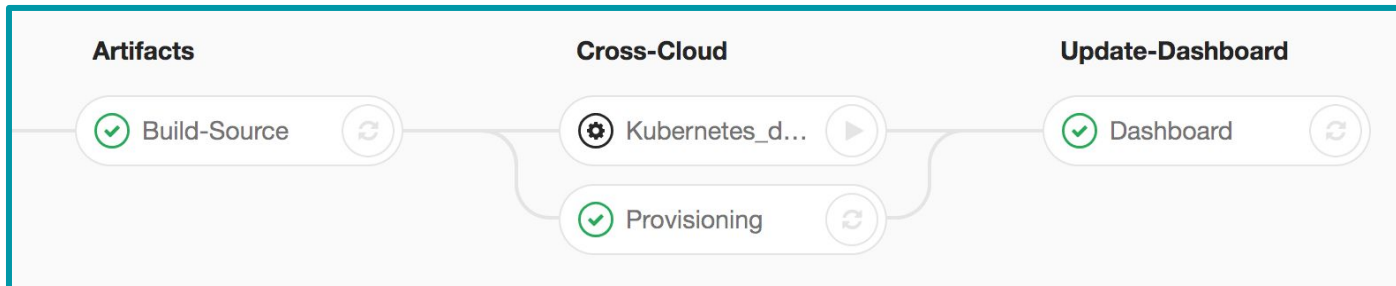

KubeCon

CloudNativeCon

Europe 2019

1. **Artifacts:** Collect K8s artifact pinings from the previous K8s builds
2. **Environment Provisioning:** Provision hardware and bootstrap K8s
3. **Update-Dashboard:** Update deployment badges

# Build Pipeline Stage

KubeCon

CloudNativeCon

Europe 2019

1. **Build:** Compile or retrieve binaries and e2e tests
2. **Package:** Create containers, create artifact pinning config and push to registry
