# STRATEGIES TO “KUBERNETIFY” LEGACY APPLICATIONS

“...every dollar invested in digital business innovation will require enterprises to spend at least **three times** that to continuously modernize their legacy apps...”

Containers reduced  
app downtime &  
associated costs ↓ **57%**

# Modernization with **Kubernetes**

Integrations

# Recipe for Modernization

## Ingredients

- Lift and Shift
- Innovate
- Deconstruct and Refactor

# Demo:

## Modernize a Java app

# Old Architecture

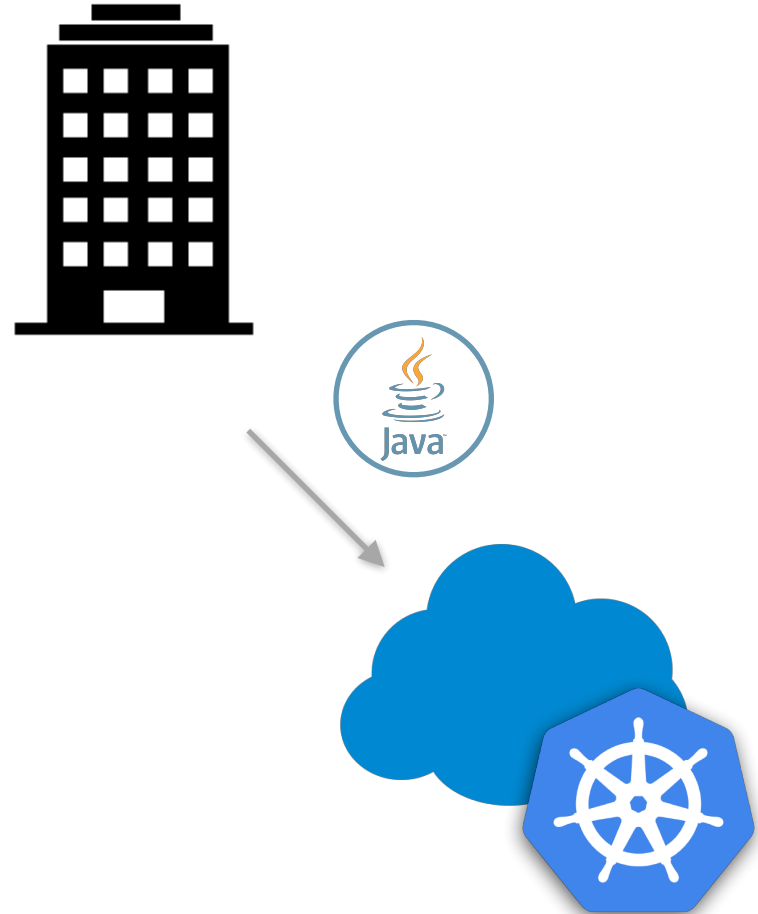

**Pro:** Speed with GTM

**Con:** Technical Debt

**Strategy:**

- Containerize and Kubernetesify
- Extract Config
- Create Persistence for Stateful Apps

# Lift and Shift DEMO

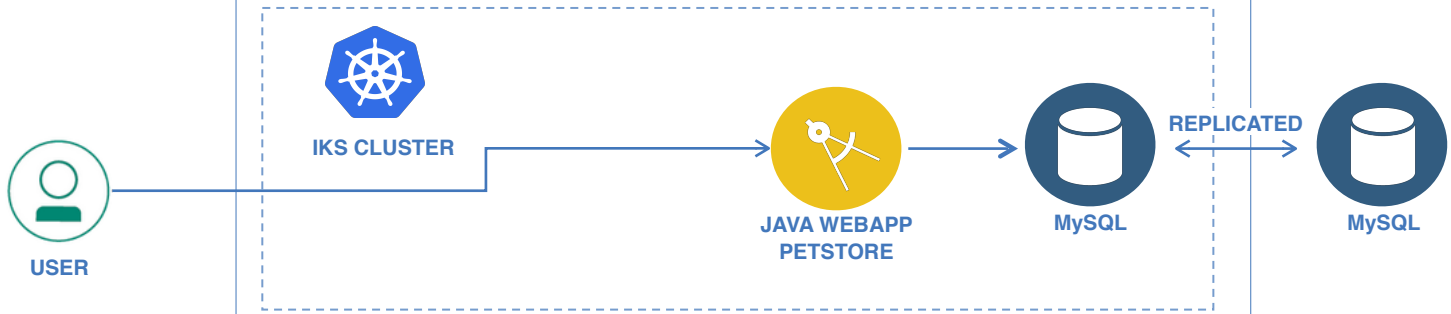

# After Lift and Shift

PUBLIC NETWORK

IBM CLOUD

PRIVATE CLOUD

**Pro:** New end-user experiences

**Con:** Legacy architecture restrictions

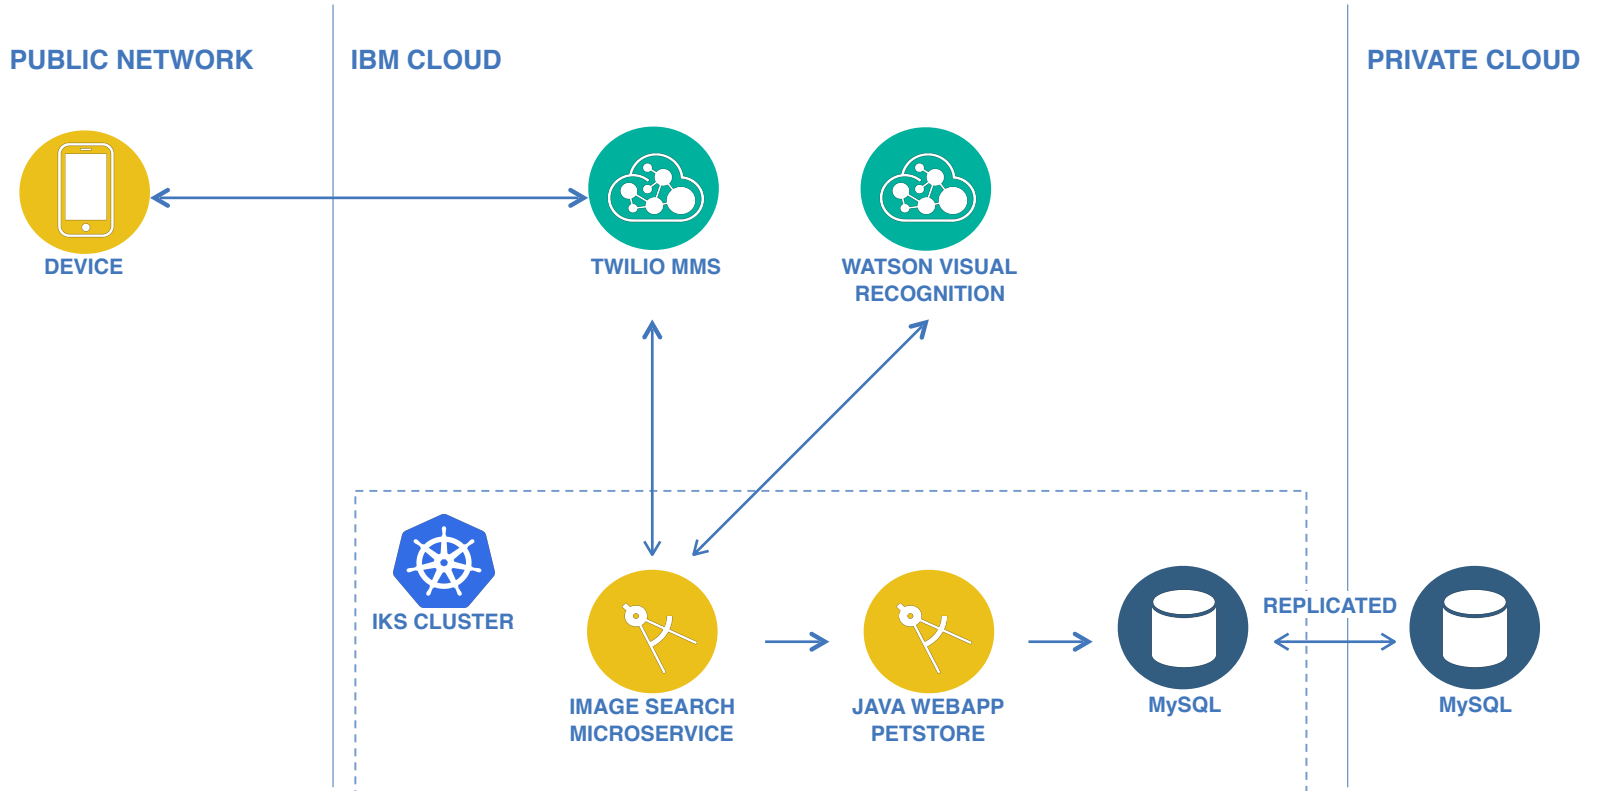

**Strategy:**

- Create new cloud-native apps
- Build off existing workloads and apps
- Identify bottle-necks

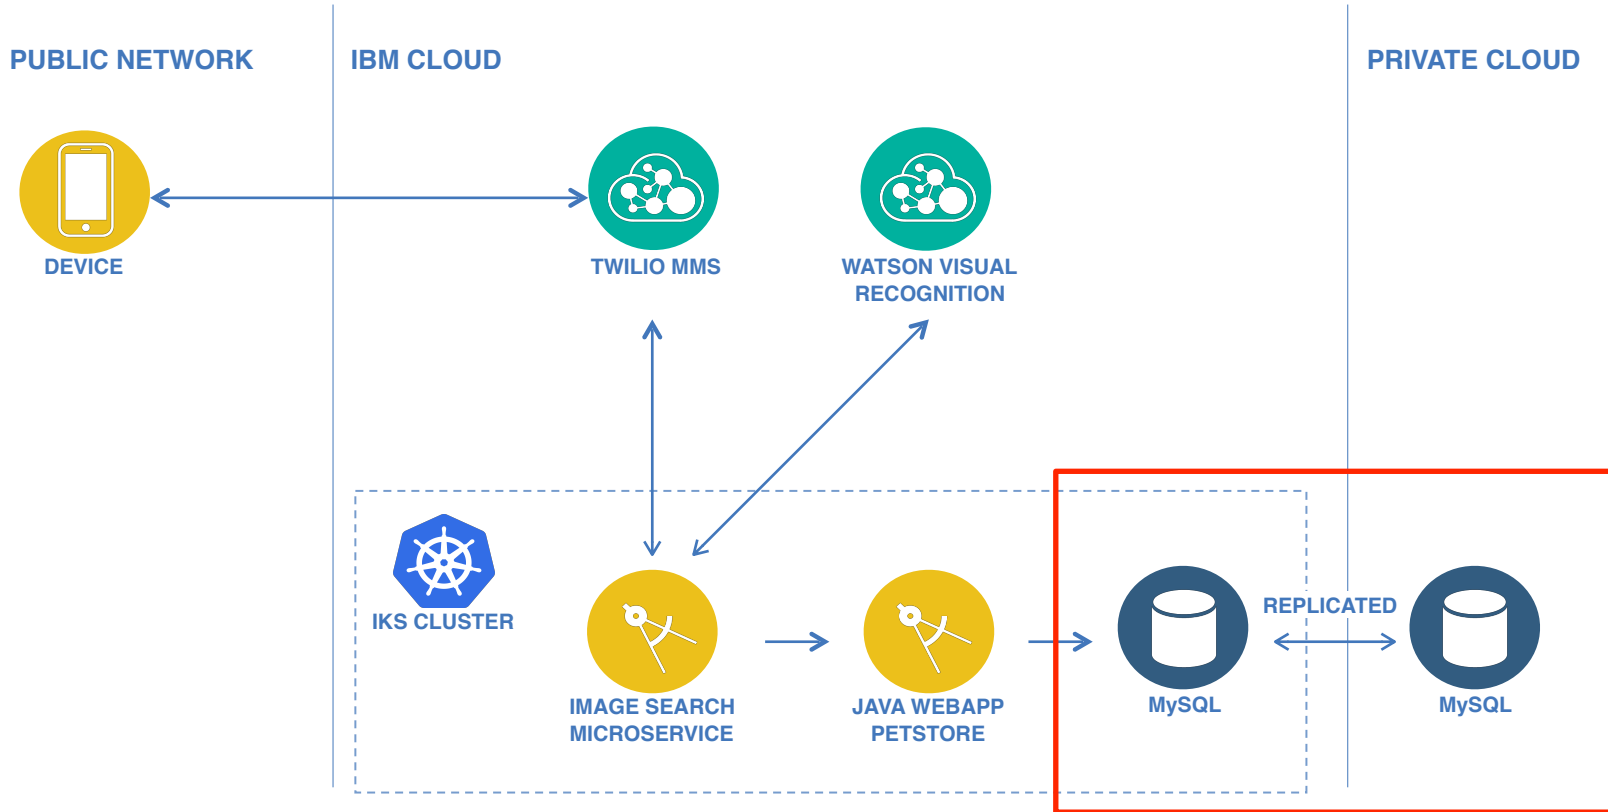

# Innovate DEMO

# New Architecture

# New Architecture

## Deconstruct and Refactor

**Pro:** Performant modern apps

**Con:** Time-consuming and expensive

### Strategy:

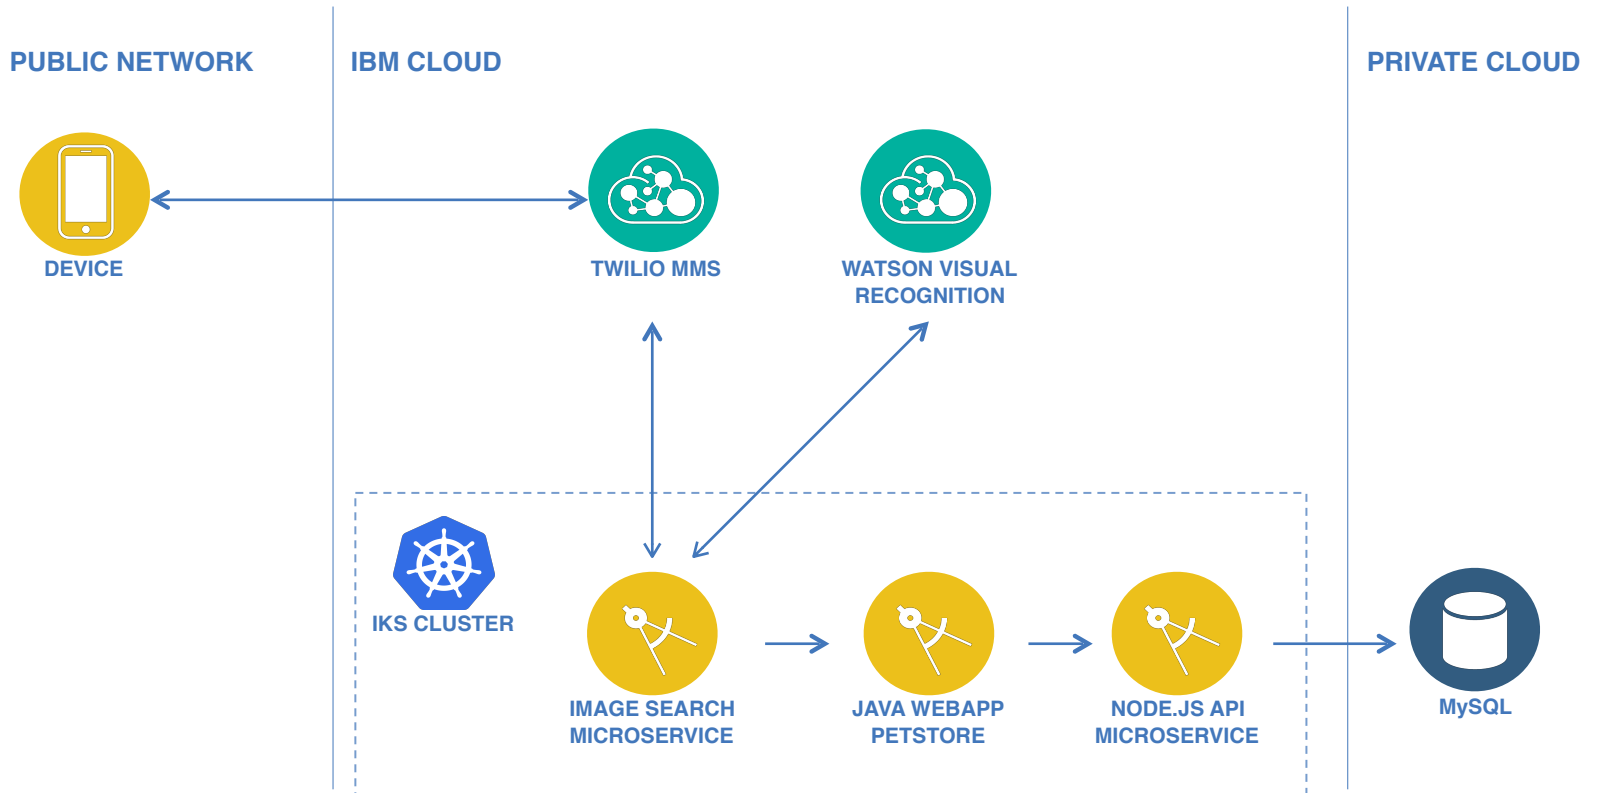

- Identify service to deconstruct
- Create GLUE code (APIs) to modernize legacy apps
- Refactor and eliminate legacy apps

# Deconstruct DEMO

# New-New Architecture

**1. Lift and Shift**

**2. Innovate**

**3. Deconstruct**
