# SIG Multicluster

*Paul Morie*

*Irfan Ur Rehman*

*Quinton Hoole*

# Agenda

KubeCon

CloudNativeCon

North America 2019

- **History Lesson**
- **Current SIG Projects**
- **Survey**
- **Future of the SIG**

**We're here to talk, please feel free to ask questions as we go**

# A little history

KubeCon

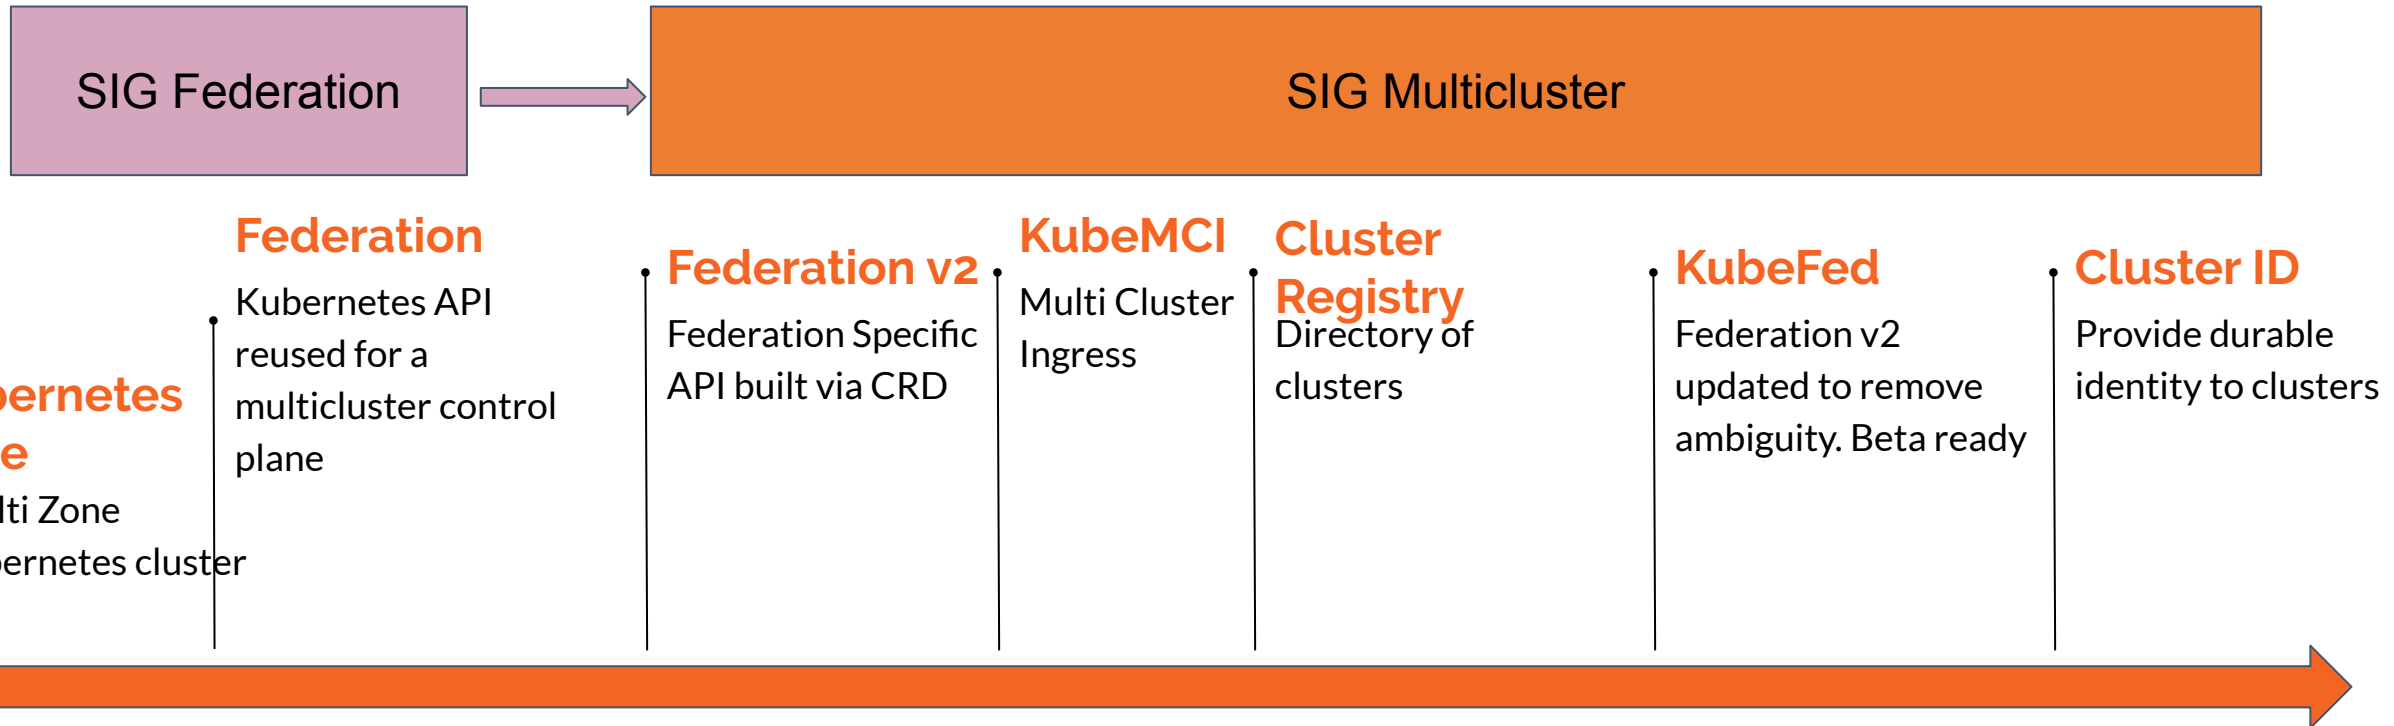

CloudNativeCon

North America 2019

# A little history

# Current SIG Projects

KubeCon

CloudNativeCon

North America 2019

- **KubeFed**
- **Cluster Registry**
- **Cluster ID**
- **KubeMCI CLI**

# KubeFed

- **Big Idea: Distribute K8s resources to multiple clusters**
  - Coordinate the configuration of multiple clusters from a single set of APIs in a hosting cluster
- **Current Status: Alpha - Just short of beta**
- **What's Next:**
  - Determine whether there is enough community backing to bring to beta
- **Repo:** <https://github.com/kubernetes-sigs/kubefed>

# KubeFed - Updates

KubeCon

CloudNativeCon

North America 2019

- Propagation status improved
- Updates in how KubeFed handles annotations
- API group changed (from kubefed.k8s.io to kubefed.io)
- *APIVersion* of the target resource can now be configured
- API Validations using admission web hook
- json patch overrides

# Cluster Registry

KubeCon

CloudNativeCon

North America 2019

- **Big Idea: Track a collection of clusters**
  - Inventory which can store per cluster metadata
- **Current Status: Alpha**
- **What's Next:**
  - Determine extent of adoption
  - Determine beta criteria
- **Repo:** <https://github.com/kubernetes/cluster-registry>

# Cluster ID

KubeCon

CloudNativeCon

North America 2019

- **Big Idea: Durable identification of a cluster**
  - Give clusters a permanent ID coordinate
- **Current Status: Paper (stalled)**
- **What's Next:**
  - Implementation of the proposal

# KubeMCI CLI

KubeCon

CloudNativeCon

North America 2019

- **Big Idea: CLI tool to configure ingresses across clusters**
  - Enable customers to create global load balancers for their applications running across multiple k8s clusters. This is essential to building HA services.
- **Current Status: Beta.**
- **Feedback:** Feedback from customers in production:
  - <https://github.com/GoogleCloudPlatform/k8s-multicluster-ingress/issues/117>
- **What's Next:**
  - Continue to iterate with customers
- **Repo:**<https://github.com/GoogleCloudPlatform/k8s-multicluster-ingress>

# Our Survey

KubeCon

CloudNativeCon

North America 2019

44 respondees

Not finished surveying yet

<https://www.surveymonkey.com/r/5ZXRMV8>

# Survey Respondees

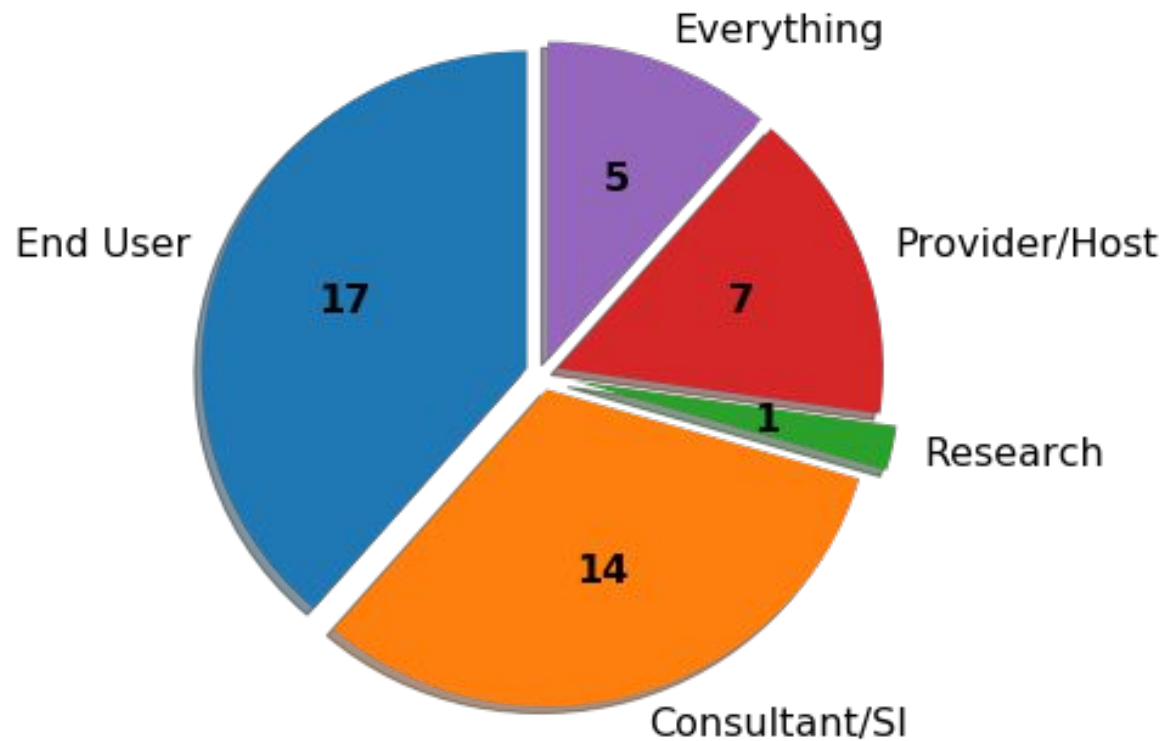

KubeCon

CloudNativeCon

North America 2019

## Organization Type

## Kubernetes Status

# Survey Respondees

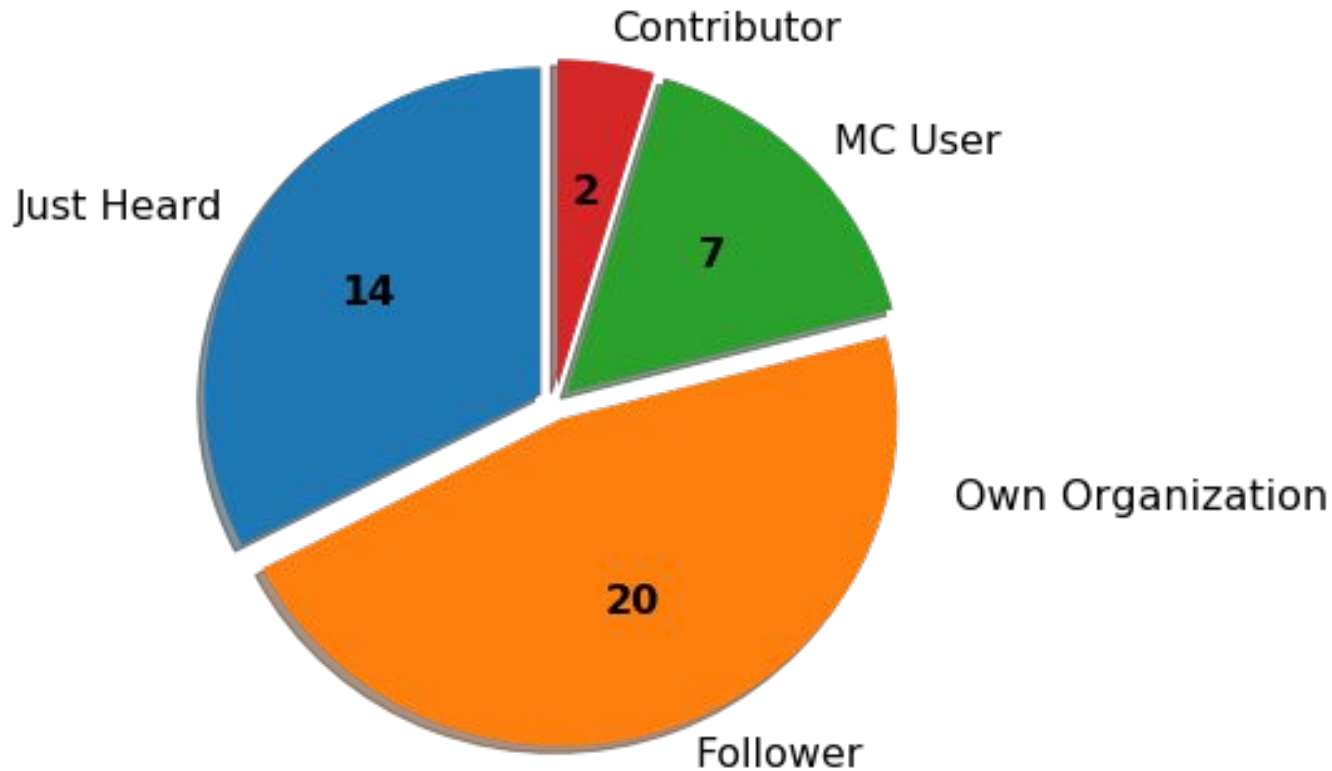

KubeCon

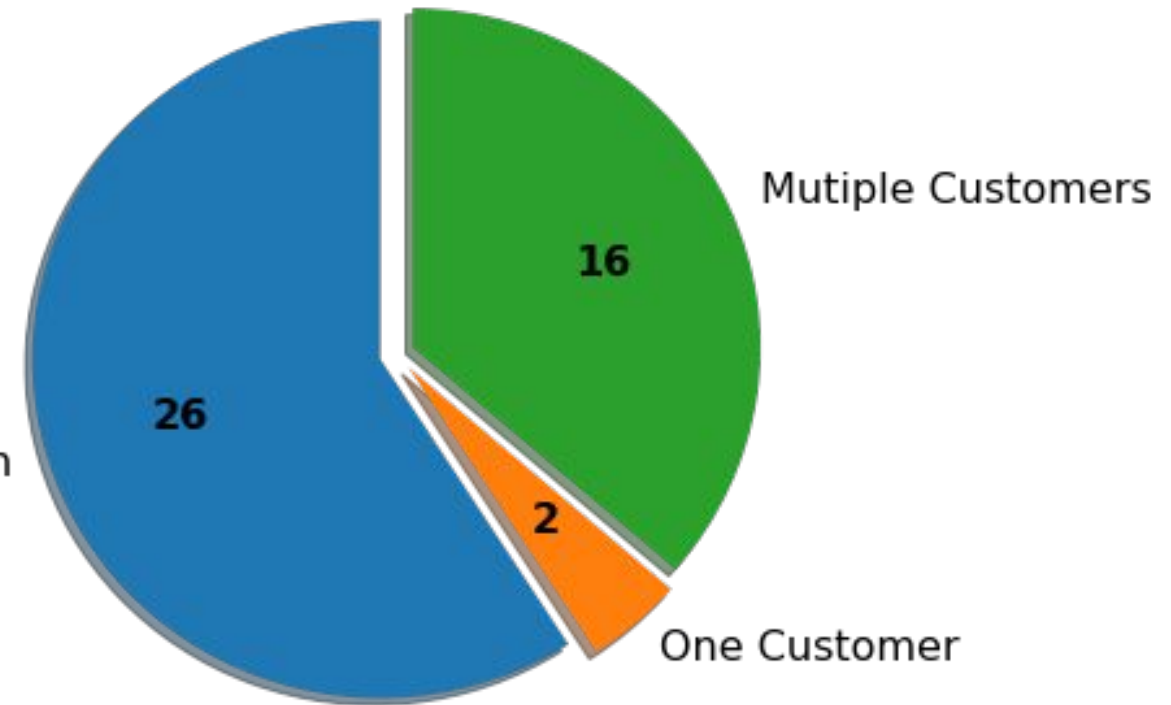

CloudNativeCon

North America 2019

## SIG Involvement

## Whose Answers?

# Cluster Size

KubeCon

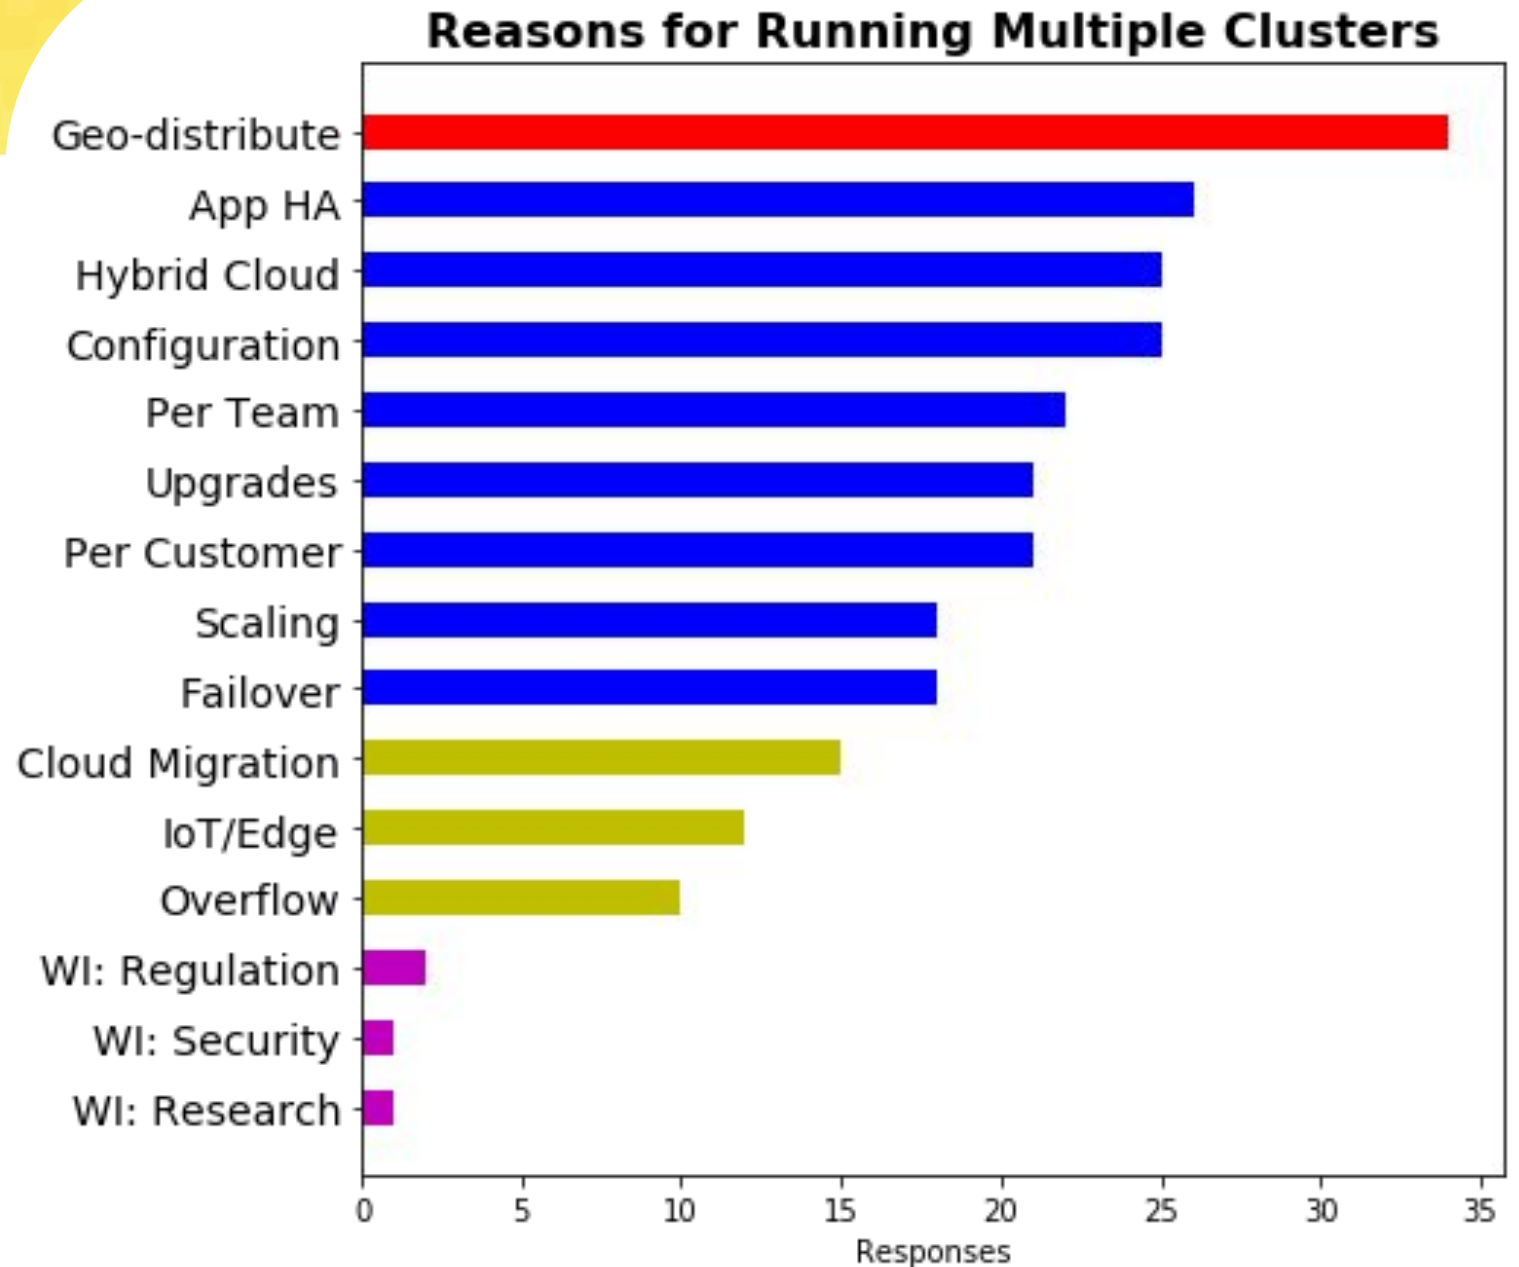

CloudNativeCon

North America 2019

Organization Type	Responses	Min.	Median	Max
Consultant/SI	7	4	12	30
End-User	17	2	16	5000
Provider/Host	4	10	75	150
Research	2	3	6.5	10
Everything	14	5	25	1000

# Multicluster Reasons

# Cluster Registry

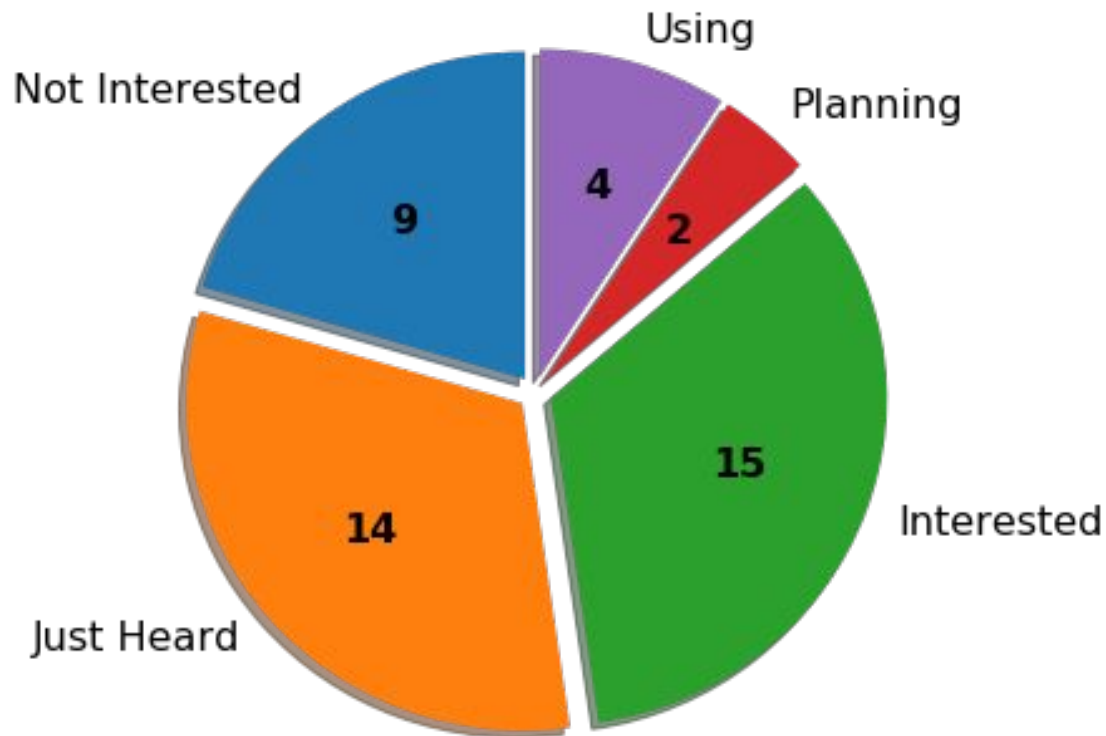

KubeCon

CloudNativeCon

North America 2019

## Cluster Registry Interest

*We have a internally build rudimentary form of Cluster Registry ... We would like to adopt something which is better integrated with the rest of the ecosystem.*

*It's abandonware, I don't even understand what it could do.*

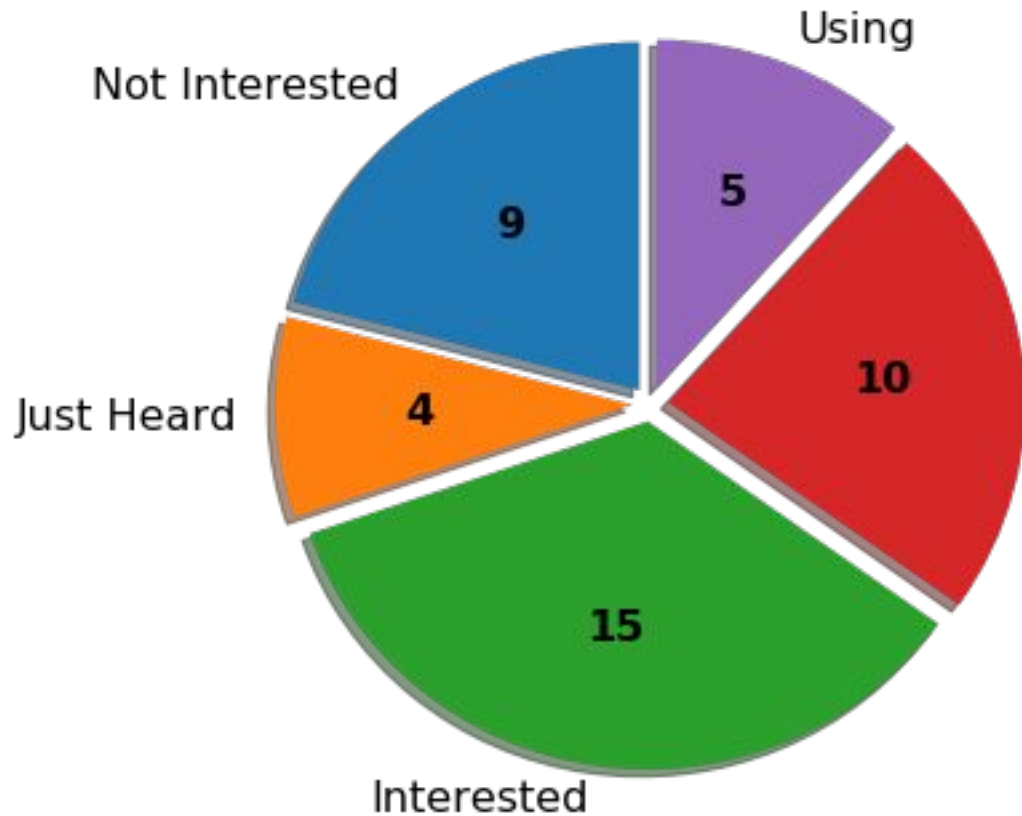

*There's a lot of overlap with the cluster-api SIG cluster-lifecycle project ... and neither provides exactly the model we need.*

*We have a better internal replacement*

*I see this effort as critical to Day 2 operations.*

# KubeFed

## KubeFed Interest

*Our current solution for Fog/Edge computing ... can be solved using cluster federation*

*The multi-cluster Ingress/Namespace sync seems perfect for us.*

*The requirements of API compatibility are too onerous*

*KubeFed has been so long in development that we were forced to build our own tools*

*The other big desire is for pull-based reconciliation instead of push.*

*Waiting to get out of beta and to see wider adoption among the community.*

# What's next?

KubeCon

CloudNativeCon

North America 2019

- Areas to explore
  - Inventory / Grouping
  - Cluster ID/Ownership
  - Auth{n,z}
  - Multi-cluster spanning:
    - Namespaces
    - Workloads
    - Networks
    - Storage
  - How resources / work get to clusters
- F2F / dial-in meeting to hash out concentration areas next year?

# Show us what you got

KubeCon

CloudNativeCon

North America 2019

We'd love to see demos of what you're working on related to multicluster!

# Next steps..

KubeCon

CloudNativeCon

North America 2019

- **Communication across clusters and network topologies**
  - Network service mesh might be useful, but we definitely need to define the networking constructs and multicluster schemes
- **Access control between clusters**
  - Authentication and authorization between clusters need to be correctly established

Discussion opened by Tim Hockin at

[https://docs.google.com/document/d/1G1flukib7Fy\\_LpLUoHZPhcZ5T-w52D2YT9W1465dtY](https://docs.google.com/document/d/1G1flukib7Fy_LpLUoHZPhcZ5T-w52D2YT9W1465dtY)

# Next steps..

KubeCon

CloudNativeCon

North America 2019

- **Cross cluster service discovery and dns name resolution**
  - We have some implementations but that mandates external LBs per service and that's limiting
- **Giving meaning to single cluster resources across multiple clusters**
- ....
