# Prioritized Requirements

- Reproducible build and test (dev x ci)
- UI to browse build and test history
- Github/PR integration
- Hermetically sealed build and test, particularly for user-submitted PRs, no bots
- Fast (no docker push, incremental rebuilds, remote builds)
- Cheap or free?
- OSS?

# Tech Eval (with disclaimer)

# Tech Eval (kind)

- Used by kubernetes/kubernetes
- Fast create/delete clusters
- Easy for local dev
- No more docker push
- OSS

# Tech Eval (Packet)

- Free hardware! (for OSS through partnership with CNCF)
- Large bare metal servers
- Fast, cached Docker builds

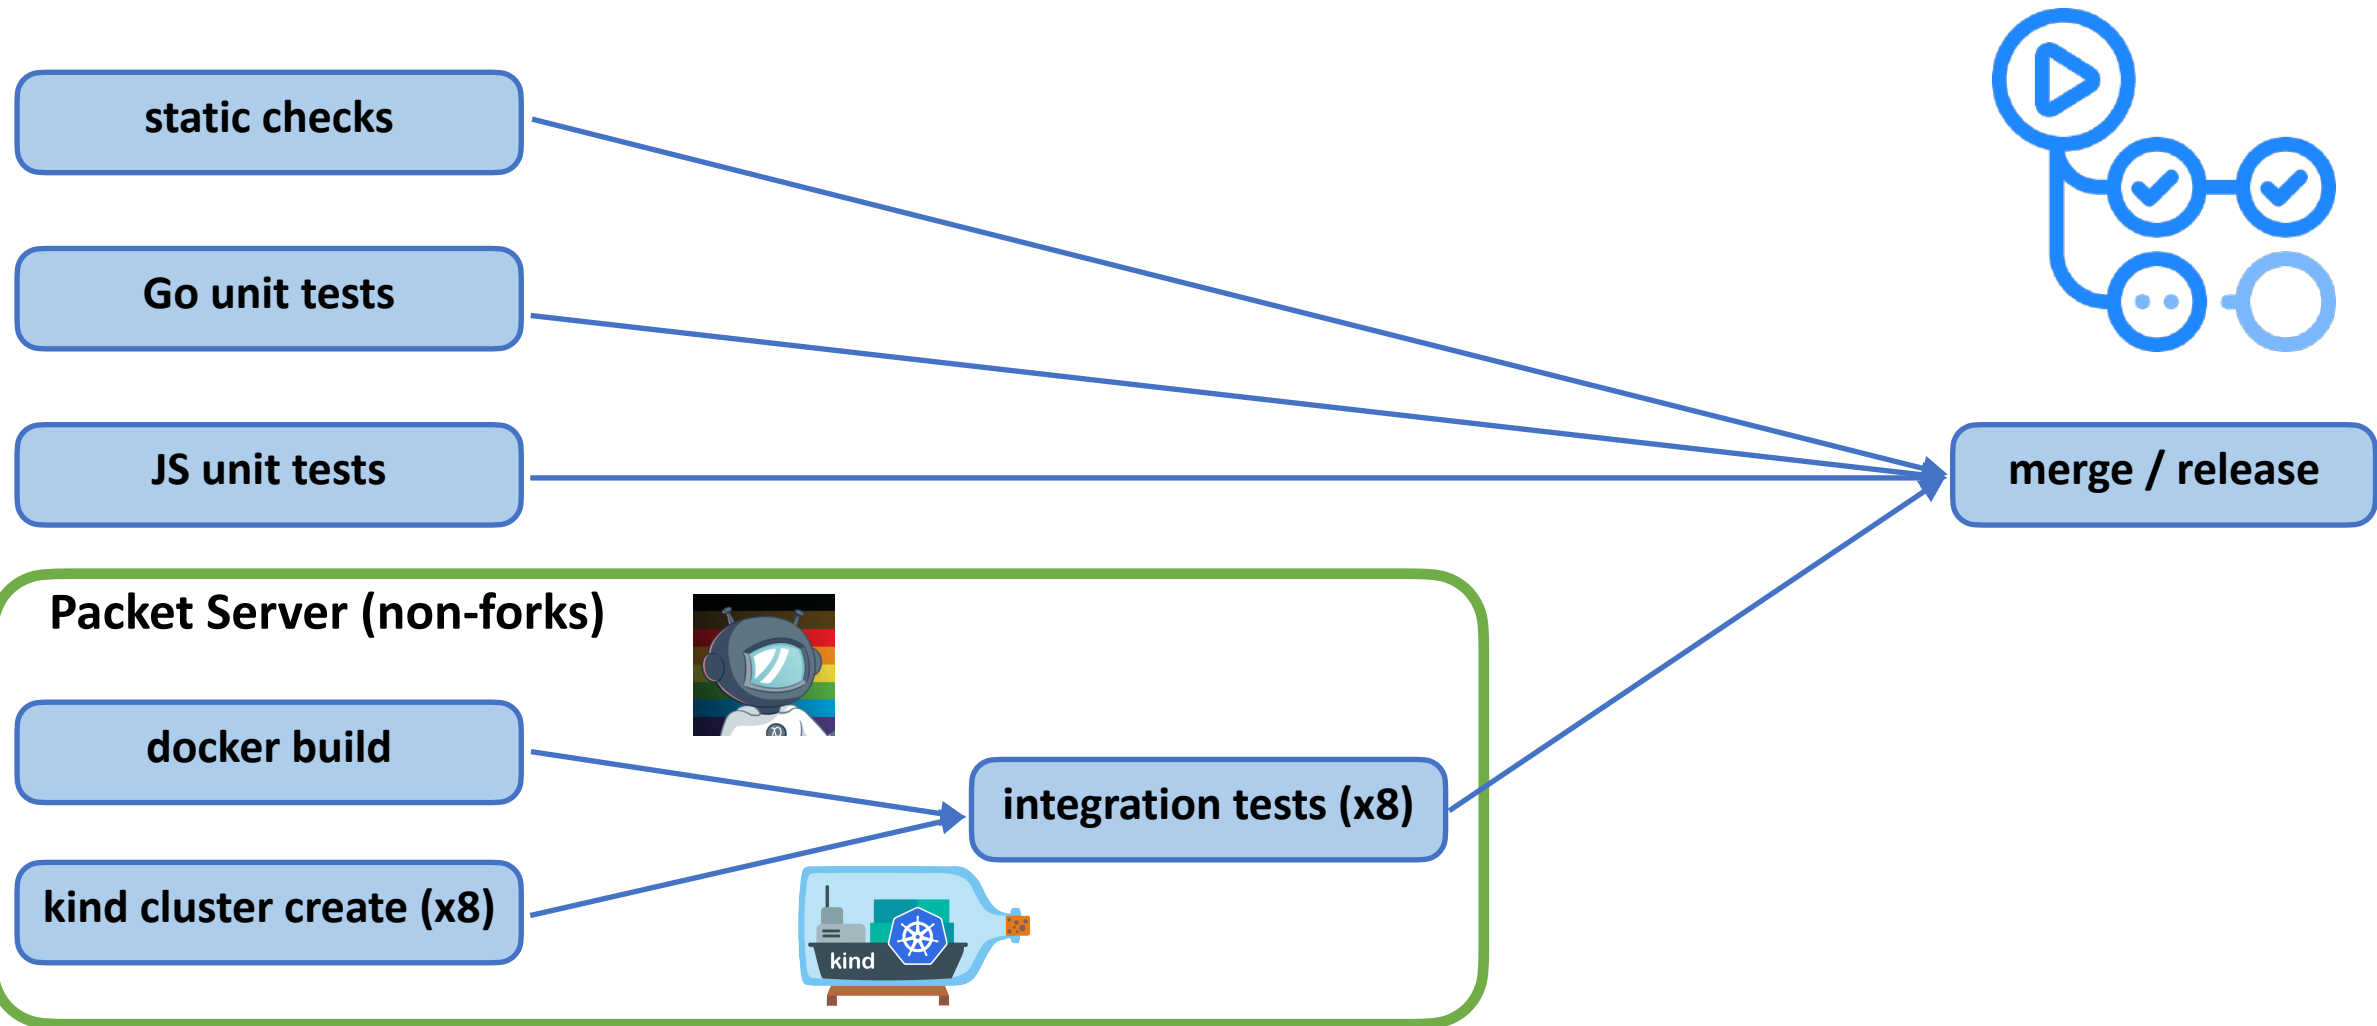

<https://www.cncf.io/announcement/2017/08/08/cloud-native-computing-foundation-expands-developer-access-demand-hardware-new-infrastructure-lab/>

# Tech Eval (GitHub Actions)

- Integrated with existing repo / PRs
- Matrix builds
- Flexible task dependencies
- Free for OSS projects

# Take 2: kind + Packet + GitHub Actions

<https://github.com/linkerd/linkerd2/commit/3be2b41a794237edddfdc5c503d5b986b86145e5>

## # kind

bentheelder and you

**siggy** 3 months ago

greetings folks. we're creating kind clusters on remote hosts, via `DOCKER_HOST=ssh://x.x.x.x`. once we've created the kind cluster, we're opening an ssh tunnel to enable kubectl to connect to it, like so:

```
export KUBECONFIG=$(kind get kubeconfig-path --name=$KIND_CLUSTER)
KIND_PORT=$(kubectl config view -o jsonpath="{.clusters[?(@.name=='$KIND_CLUSTER')].cluster.server}" | cut -d':' -f3)
ssh -4 -N -L $KIND_PORT:localhost:$KIND_PORT $USER@$REMOTE_DOCKER
```

... my question is... is this crazy? is there a better pattern? also, thank you for building kind it's so great! (edited)

1

**bentheelder** 3 months ago

thanks for the feedback!

I'm not sure if there's a better pattern, we didn't really expect remote hosts, and I at least haven't used docker like that 😅

**bentheelder** 3 months ago

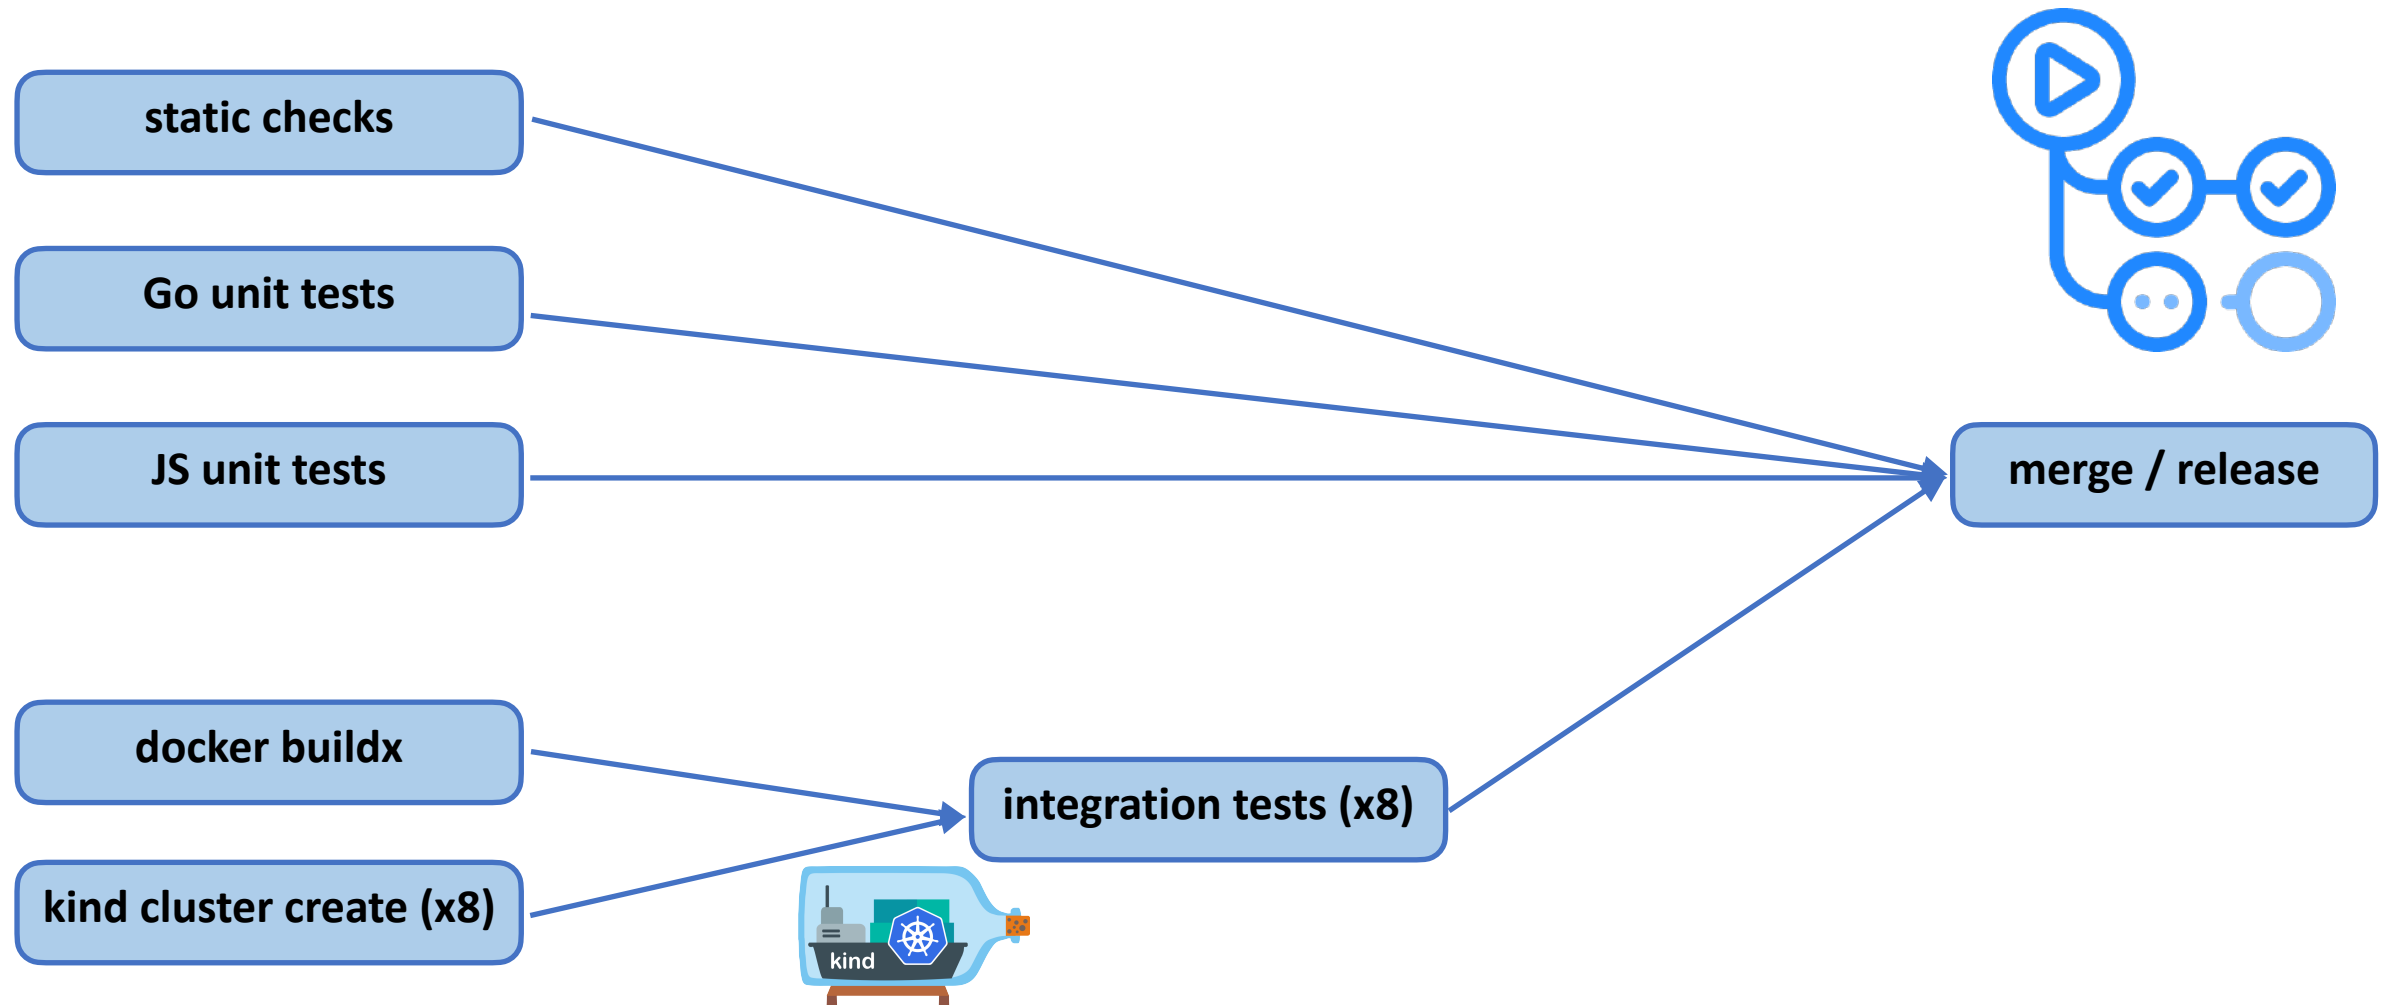

that looks relatively sane to me

**siggy** 3 months ago

cool thanks Ben, just wanted to check in. yeah, `DOCKER_HOST=ssh://` is pretty handy.

# Take 3: kind + buildx + GitHub Actions

<https://github.com/linkerd/linkerd2/commit/5e789ba152509df821f212a04be44a18ab5a0da1>

# Demo: Booting 8 k8s clusters on a git push

# Lessons Learned

- Use [kind](#) (shoutout to #kind in k8s Slack)
- Cache your [docker] builds
- DOCKER\_HOST=ssh://
- docker buildx for caching and multiarch
- Shoutouts to Packet and GitHub Actions for supporting OSS
