

# UTILIZING KUBERNETES IN HYBRID AND MULTI-CLOUD ENVIRONMENTS

---

Terry Chiang, Data Scientist  
Sandeep Deshmukh, Platform Product Manager  
Don Wake, Technical Marketing Engineer

# CONTAINERS - THE KEY TO THE HYBRID CLOUD

Container infrastructure is fueling software development for the next decade

## 75%

By 2022, will have deployed containers

## 54%

Of container deployments will be on-prem

\*Source: IDC

## **KEY CHALLENGES AND REQUIREMENTS WITH CONTAINERS**

---

How can you make this process easier to scale & manage in a single pane of glass type of approach?

Is there a way to utilize the power of Kubernetes and also manage a multi-cloud infrastructure?

What options can you offer to manage, install and scale Kubernetes apps?

How do you address the difficulties of Machine Learning Model building, training & deployment?

# HPE EZMERAL CONTAINER PLATFORM

Unified solution to accelerate time to value for both cloud-native and non cloud-native apps

## HPE EZMERAL CONTAINER PLATFORM

Enterprise Integrations & Security

CNCF Certified Kubernetes++

Multi-tenant Container Control Plane

HPE Ezmeral Data Fabric (formerly MapR)

External Data Connectivity

On-Premises

Public Cloud

# HPE EZMERAL CONTAINER PLATFORM

## Key Takeaways

---

Kubernetes clusters can be deployed on Multi-Cloud infrastructures transparently

Kubernetes provides an excellent platform for multi-tenant management

KubeDirector & K8S enable stateful scale-out application clusters – transparently & simply
