## Pandoc-eqnos Demo

The equation for a straight line is

$$
\begin{equation*}
y=m x+b \tag{1}
\end{equation*}
$$

and the equation for a polynomial is

$$
\begin{equation*}
y=\sum_{n=0}^{\infty} a_{n} x^{n} \tag{2}
\end{equation*}
$$

Equation 1 and eq. 2 are known to all first-year math students.
The Fourier series is a little more advanced:

$$
\begin{equation*}
y=\frac{1}{2} a_{0}+\sum_{n=1}^{\infty} a_{n} \cos (n x)+\sum_{n=1}^{\infty} b_{n} \cos (n x) \tag{3}
\end{equation*}
$$

Equations 1-3 are used throughout science and engineering.
Equations can be left unnumbered if we do not need to refer to them:

$$
y=A e^{-\gamma t} \cos (2 \pi f t)
$$

It is also possible to number equations generically without planning to refer to them; e.g.:

$$
\begin{equation*}
\pi=3.141592653589793238462643 \ldots \tag{4}
\end{equation*}
$$
